# Chapter 1

## Namespace Index

### 1.1 Namespace List

Here is a list of all namespaces with brief descriptions:

<a href="#">AFaccount</a>	..	??
<a href="#">AFlib</a>	..	??
<a href="#">AFlib::id</a>	..	??
<a href="#">AFlib::transfer</a>	..	??
<a href="#">AFlib::transfer::answer</a>	..	??
<a href="#">AFlib::transfer::send</a>	..	??
<a href="#">AFquick</a>	..	??

## Chapter 2

# Hierarchical Index

### 2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

AFlib::Storage::AccountStorage . . . . .	??
AFlib::File . . . . .	??
AFlib::id::Global_bit . . . . .	??
AFlib::id::History . . . . .	??
AFlib::id::Object . . . . .	??
AFquick::MenuSingle . . . . .	??
AFlib::transfer::answer::Object . . . . .	??
AFlib::transfer::send::Operates . . . . .	??
AFlib::Storage::PluginStorage . . . . .	??
QAbstractListModel	
AFquick::MenuModel . . . . .	??
QGuiApplication	
AFquick::GuiApplication . . . . .	??
QList	
AFlib::transfer::Answer . . . . .	??
AFlib::transfer::answer::DPathObjectList . . . . .	??
AFlib::transfer::Send . . . . .	??
AFlib::transfer::send::Objects . . . . .	??
QNetworkAccessManager	
AFlib::API . . . . .	??
QObject	
AFaccount::Storage . . . . .	??
AFlib::Dir . . . . .	??
AFlib::Function . . . . .	??
AFlib::id::ObjectTemplate . . . . .	??
AFaccount::Info . . . . .	??
AFaccount::Account . . . . .	??
AFaccount::Group . . . . .	??
AFlib::ServerSetting . . . . .	??
AFlib::Setting . . . . .	??
AFlib::Storage . . . . .	??
AFlib::System . . . . .	??
AFquick::GuiPlugin . . . . .	??
AFquick::GuiSize . . . . .	??
Server . . . . .	??

AFlib::Storage::SingleStorage . . . . .	??
AFlib::id::TbitStruct< bitsize > . . . . .	??
AFlib::id::TbitStruct< 32 > . . . . .	??
AFlib::id::Account_bit . . . . .	??
AFlib::id::Object_bit . . . . .	??
AFlib::id::Object . . . . .	??
AFlib::id::TbitStruct< 48 > . . . . .	??
AFlib::id::Operate_bit . . . . .	??
AFlib::id::Operate . . . . .	??

## Chapter 3

# Class Index

### 3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">AFaccount::Account</a>	??
<a href="#">AFlib::id::Account_bit</a>	??
<a href="#">AFlib::Storage::AccountStorage</a>	??
<a href="#">AFlib::transfer::Answer</a>	??
<a href="#">AFlib::API</a>	??
<a href="#">AFlib::Dir</a>	??
<a href="#">AFlib::transfer::answer::DPathObjectList</a>	??
<a href="#">AFlib::File</a>	??
<a href="#">AFlib::Function</a>	??
<a href="#">AFlib::id::Global_bit</a>	??
<a href="#">AFaccount::Group</a>	??
<a href="#">AFquick::GuiApplication</a>	??
<a href="#">AFquick::GuiPlugin</a>	??
<a href="#">AFquick::GuiSize</a>	??
<a href="#">AFlib::id::History</a>	??
<a href="#">AFaccount::Info</a>	??
<a href="#">AFquick::MenuModel</a>	??
<a href="#">AFquick::MenuSingle</a>	??
<a href="#">AFlib::transfer::answer::Object</a>	??
<a href="#">AFlib::id::Object</a>	??
<a href="#">AFlib::id::Object_bit</a>	
The <a href="#">Function</a> class	??
<a href="#">AFlib::transfer::send::Objects</a>	??
<a href="#">AFlib::id::ObjectTemplate</a>	??
<a href="#">AFlib::id::Operate</a>	??
<a href="#">AFlib::id::Operate_bit</a>	??
<a href="#">AFlib::transfer::send::Operates</a>	??
<a href="#">AFlib::Storage::PluginStorage</a>	??
<a href="#">AFlib::transfer::Send</a>	??
<a href="#">Server</a>	??
<a href="#">AFlib::ServerSetting</a>	??
<a href="#">AFlib::Setting</a>	??
<a href="#">AFlib::Storage::SingleStorage</a>	??
<a href="#">AFaccount::Storage</a>	
The <a href="#">AFaccount::Storage</a> class we load all possible account, and take it on RAM, so we can access to them always in any time, but we need to make shorten every object that we have and it give us speed when we parse this list	??

<a href="#">AFlib::Storage</a> . . . . .	??
<a href="#">AFlib::System</a> . . . . .	??
<a href="#">AFlib::id::TbitStruct&lt; bitsize &gt;</a> . . . . .	??

## Chapter 4

# File Index

### 4.1 File List

Here is a list of all files with brief descriptions:

lib_baseAF/account/afAccount.cpp	??
lib_baseAF/account/afAccountGroup.cpp	??
lib_baseAF/account/afAccountInfo.cpp	??
lib_baseAF/account/afAccountStorage.cpp	??
lib_baseAF/base/afAPI.cpp	??
lib_baseAF/base/afEnum.cpp	??
lib_baseAF/base/afFunction.cpp	??

## Chapter 5

# Namespace Documentation

### 5.1 AFaccount Namespace Reference

#### Classes

- class [Account](#)
- class [Group](#)
- class [Info](#)
- class [Storage](#)

*The [AFaccount::Storage](#) class we load all possible account, and take it on RAM, so we can access to them always in any time, but we need to make shorten every object that we have and it give us speed when we parse this list.*

#### Typedefs

- typedef QSharedPointer< [Account](#) > [AccountPtr](#)
- typedef std::vector< [AccountPtr](#) > [AccountPtrV](#)
- typedef QSharedPointer< [Group](#) > [GroupPtr](#)
- typedef std::vector< [GroupPtr](#) > [GroupPtrV](#)
- typedef QSharedPointer< [Info](#) > [InfoPtr](#)
- typedef QList< [InfoPtr](#) > [InfoPtrList](#)
- typedef QSharedPointer< [Storage](#) > [StoragePtr](#)

#### Enumerations

- enum [AccessType](#)

#### Functions

- [AccountPtr](#) [own](#) ()
- [AccessType](#) [toAccessType](#) (const quint8 i)
- quint8 [fromAccessType](#) ([AccessType](#) type)
- [StoragePtr](#) [storage](#) (QObject \*parent=nullptr)
- [AccountPtr](#) [user](#) (QObject \*parent=nullptr)

## 5.1.1 Typedef Documentation

### 5.1.1.1 AccountPtr

```
typedef QSharedPointer<Account> AFaccount::AccountPtr
```

Definition at line 14 of file afAccount.h.

### 5.1.1.2 AccountPtrV

```
typedef std::vector<AccountPtr> AFaccount::AccountPtrV
```

Definition at line 16 of file afAccount.h.

### 5.1.1.3 GroupPtr

```
typedef QSharedPointer<Group> AFaccount::GroupPtr
```

Definition at line 12 of file afAccountGroup.h.

### 5.1.1.4 GroupPtrV

```
typedef std::vector<GroupPtr> AFaccount::GroupPtrV
```

Definition at line 14 of file afAccountGroup.h.

### 5.1.1.5 InfoPtr

```
typedef QSharedPointer<Info> AFaccount::InfoPtr
```

Definition at line 13 of file afAccountInfo.h.

#### 5.1.1.6 InfoPtrList

```
typedef QList<InfoPtr> AFaccount::InfoPtrList
```

Definition at line 15 of file afAccountInfo.h.

#### 5.1.1.7 StoragePtr

```
typedef QSharedPointer<Storage> AFaccount::StoragePtr
```

Definition at line 7 of file afAccountStorage.h.

### 5.1.2 Enumeration Type Documentation

#### 5.1.2.1 AccessType

```
enum AFaccount::AccessType [strong]
```

Enumerator

Owner	
Moderator	
Creator	
User	
Default	
First	

Definition at line 16 of file afAccountGroup.h.

### 5.1.3 Function Documentation

#### 5.1.3.1 fromAccessType()

```
quint8 AFaccount::fromAccessType (
    AccessType type )
```

Definition at line 101 of file afAccountGroup.cpp.

#### 5.1.3.2 own()

```
AFaccount::AccountPtr AFaccount::own ( )
```

Definition at line 36 of file afAccount.cpp.

#### 5.1.3.3 storage()

```
AFaccount::StoragePtr AFaccount::storage (
    QObject * parent = nullptr )
```

Definition at line 265 of file afAccountStorage.cpp.

#### 5.1.3.4 toAccessType()

```
AccessType AFaccount::toAccessType (
    const quint8 i )
```

Definition at line 96 of file afAccountGroup.cpp.

#### 5.1.3.5 user()

```
AFaccount::AccountPtr AFaccount::user (
    QObject * parent = nullptr )
```

Definition at line 273 of file afAccountStorage.cpp.

## 5.2 AFlib Namespace Reference

### Namespaces

- [id](#)

- [ServerSettingPtr afServerSettings](#) (QObject \*parent=nullptr)
- [StoragePtr afStorage](#) ()

## 5.2.1 Typedef Documentation

### 5.2.1.1 ApiPtr

```
typedef QSharedPointer<API> AFlib::ApiPtr
```

Definition at line 11 of file afAPI.h.

### 5.2.1.2 ApiPtrList

```
typedef QList<ApiPtr> AFlib::ApiPtrList
```

Definition at line 13 of file afAPI.h.

### 5.2.1.3 DirPtr

```
typedef QSharedPointer<Dir> AFlib::DirPtr
```

Definition at line 10 of file afDir.h.

### 5.2.1.4 HIdType

```
typedef HistoryIdType AFlib::HIdType
```

Definition at line 56 of file afEnum.h.

#### 5.2.1.5 IdAccount\_bit

```
typedef id::Account_bit AFlib::IdAccount_bit
```

Definition at line 14 of file afld.h.

#### 5.2.1.6 IdGlobal\_bit

```
typedef id::Global_bit AFlib::IdGlobal_bit
```

Definition at line 19 of file afld.h.

#### 5.2.1.7 IdHistory

```
typedef id::History AFlib::IdHistory
```

Definition at line 16 of file afld.h.

#### 5.2.1.8 IdHistoryPtr

```
typedef id::HistoryPtr AFlib::IdHistoryPtr
```

Definition at line 17 of file afld.h.

#### 5.2.1.9 IdObject

```
typedef id::Object AFlib::IdObject
```

Definition at line 20 of file afld.h.

#### 5.2.1.10 IdObject\_bit

```
typedef id::Object_bit AFlib::IdObject_bit
```

Definition at line 22 of file afld.h.

#### 5.2.1.11 IdObjectPtr

```
typedef id::ObjectPtr AFlib::IdObjectPtr
```

Definition at line 23 of file afld.h.

#### 5.2.1.12 IdObjectPtrV

```
typedef id::ObjectPtrV AFlib::IdObjectPtrV
```

Definition at line 24 of file afld.h.

#### 5.2.1.13 IdObjectTemplate

```
typedef id::ObjectTemplate AFlib::IdObjectTemplate
```

Definition at line 21 of file afld.h.

#### 5.2.1.14 IdOperate

```
typedef id::Operate AFlib::IdOperate
```

Definition at line 26 of file afld.h.

#### 5.2.1.15 IdOperatePtr

```
typedef id::OperatePtr AFlib::IdOperatePtr
```

Definition at line 27 of file afld.h.

#### 5.2.1.16 IdOperatePtrList

```
typedef id::OperatePtrList AFlib::IdOperatePtrList
```

Definition at line 28 of file afld.h.

#### 5.2.1.17 ServerSettingPtr

```
typedef QSharedPointer<ServerSetting> AFlib::ServerSettingPtr
```

Definition at line 11 of file afServerSettings.h.

#### 5.2.1.18 SettingPtr

```
typedef QSharedPointer<Setting> AFlib::SettingPtr
```

Definition at line 7 of file afSetting.h.

#### 5.2.1.19 SIdType

```
typedef SavedIdType AFlib::SIdType
```

Definition at line 71 of file afEnum.h.

#### 5.2.1.20 StoragePtr

```
typedef QSharedPointer<Storage> AFlib::StoragePtr
```

Definition at line 10 of file afStorage.h.

#### 5.2.1.21 TransferOperateSendList

```
typedef transfer::Send AFlib::TransferOperateSendList
```

Definition at line 30 of file afId.h.

### 5.2.2 Enumeration Type Documentation

#### 5.2.2.1 AccountIdType

```
enum AFlib::AccountIdType [strong]
```

Account id type enum

default [AccountIdType::LocalUser](#)

**Enumerator**

LocalUser	User, that not accept from server yet, can't send information to global server.
LocalOrganization	Local organization, use only on current device.
GlobalUser	User, that registrate on server.
GlobalOrganization	Organization, registrate on server, always have owner user.
User	User enum, unite both LocalUser and GlobalUser.
Organization	Organization enum, unite LocalOrganization and GlobalOrganization.
Local	Use for show that enum is local.
Global	Use for Global enum.
First	

Definition at line 77 of file afEnum.h.

**5.2.2.2 Attribute**

```
enum AFlib::Attribute [strong]
```

**Enumerator**

None	
Name	
Created	
Description	
Date	
Time	
LocalId	
Parent	
Email	
Login	
Icon	
Password	
UserList	
GroupMembers	List of members in Group.
FriendList	
GroupList	

Definition at line 8 of file afIdHistory.h.

**5.2.2.3 Compress**

```
enum AFlib::Compress [strong]
```

**Enumerator**

Shortest	
AllActive	
EachByOne	
Full	

Definition at line 29 of file afIdHistory.h.

**5.2.2.4 Continent**

```
enum AFlib::Continent [strong]
```

The Continent enum.

**Enumerator**

Europe	
Africa	
North_America	
South_America	
Oceania	
East_Asia	
West_Asia	
None	

Definition at line 22 of file afEnum.h.

**5.2.2.5 FileType**

```
enum AFlib::FileType [strong]
```

Id's enum list -----.

**Enumerator**

Data	
Account	
Config	
Setting	
Json	

Definition at line 36 of file afEnum.h.

### 5.2.2.6 HistoryIdType

```
enum AFlib::HistoryIdType [strong]
```

#### Enumerator

AddLine	
EditLine	
RemoveLine	
SavedChangeLine	
InnactivateLine	
ActivateLine	
First	

Definition at line 44 of file afEnum.h.

### 5.2.2.7 RequestStatus

```
enum AFlib::RequestStatus [strong]
```

#### Enumerator

None	
Send	
False	
True	

Definition at line 29 of file afAPI.h.

### 5.2.2.8 RequestType

```
enum AFlib::RequestType [strong]
```

#### Enumerator

Login	
Registrate	
RemindMyLogin	
RemindMyPassword	
Ping	
UpdateAfObjects	
AddAccount	
AddAccountById	

Definition at line 15 of file afAPI.h.

### 5.2.2.9 SavedIdType

```
enum AFlib::SavedIdType [strong]
```

#### Enumerator

Temporary	
Local	
OnTheWayToServer	
OnServer	
First	

Definition at line 61 of file afEnum.h.

### 5.2.2.10 Schedule

```
enum AFlib::Schedule [strong]
```

#### Enumerator

Once	
Daily	
Weekly	
Monthly	
Yearly	
Periodical	
OnRequest	

Definition at line 11 of file afEnum.h.

## 5.2.3 Function Documentation

### 5.2.3.1 afDir()

```
DirPtr AFlib::afDir ( )
```

Definition at line 238 of file afDir.cpp.

#### 5.2.3.2 afServerSettings()

```
AFlib::ServerSettingPtr AFlib::afServerSettings (
    QObject * parent = nullptr )
```

Definition at line 30 of file afServerSettings.cpp.

#### 5.2.3.3 afStorage()

```
StoragePtr AFlib::afStorage ( )
```

Definition at line 23 of file afStorage.cpp.

#### 5.2.3.4 api()

```
AFlib::ApiPtr AFlib::api ( )
```

Definition at line 199 of file afAPI.cpp.

#### 5.2.3.5 fromAccountIdType()

```
quint8 AFlib::fromAccountIdType (
    AFlib::AccountIdType type )
```

Definition at line 68 of file afEnum.cpp.

#### 5.2.3.6 fromHisToInt()

```
quint8 AFlib::fromHisToInt (
    AFlib::HistoryIdType type )
```

Definition at line 31 of file afEnum.cpp.

#### 5.2.3.7 fromSaveToInt()

```
quint8 AFlib::fromSaveToInt (
    AFlib::SavedIdType type )
```

Definition at line 36 of file afEnum.cpp.

### 5.2.3.8 getServerKey()

```
QString AFlib::getServerKey (
    const RequestType type,
    bool isData = false )
```

Definition at line 208 of file afAPI.cpp.

### 5.2.3.9 getServerLink()

```
QString AFlib::getServerLink (
    const RequestType type,
    bool isData = false )
```

Definition at line 226 of file afAPI.cpp.

### 5.2.3.10 historyToString() [1/2]

```
std::string AFlib::historyToString (
    AFlib::HistoryIdType type )
```

Definition at line 98 of file afEnum.cpp.

### 5.2.3.11 historyToString() [2/2]

```
std::string AFlib::historyToString (
    quint8 type )
```

Definition at line 112 of file afEnum.cpp.

### 5.2.3.12 isHidEnable()

```
bool AFlib::isHidEnable (
    AFlib::HistoryIdType type )
```

Definition at line 41 of file afEnum.cpp.

#### 5.2.3.13 operator<<()

```
QDataStream & AFlib::operator<< (
    QDataStream & d,
    const AFlib::RequestType & type )
```

Definition at line 239 of file afAPI.cpp.

#### 5.2.3.14 operator>>()

```
QDataStream & AFlib::operator>> (
    QDataStream & d,
    AFlib::RequestType & type )
```

Definition at line 244 of file afAPI.cpp.

#### 5.2.3.15 saveTypeToString() [1/2]

```
std::string AFlib::saveTypeToString (
    quint8 type )
```

Definition at line 117 of file afEnum.cpp.

#### 5.2.3.16 saveTypeToString() [2/2]

```
std::string AFlib::saveTypeToString (
    AFlib::SavedIdType type )
```

Definition at line 86 of file afEnum.cpp.

#### 5.2.3.17 toAccountIdType()

```
AFlib::AccountIdType AFlib::toAccountIdType (
    const quint8 i )
```

Definition at line 63 of file afEnum.cpp.

### 5.2.3.18 toHistoryIdType()

```
AFlib::HistoryIdType AFlib::toHistoryIdType (
    const quint8 i )
```

Definition at line 3 of file afEnum.cpp.

### 5.2.3.19 toSavedIdType()

```
AFlib::SavedIdType AFlib::toSavedIdType (
    const quint8 i )
```

Definition at line 8 of file afEnum.cpp.

## 5.3 AFlib::id Namespace Reference

### Classes

- struct [Account\\_bit](#)
- struct [Global\\_bit](#)
- class [History](#)
- class [Object](#)
- struct [Object\\_bit](#)
- *The [Function](#) class.*
- class [ObjectTemplate](#)
- class [Operate](#)
- struct [Operate\\_bit](#)
- struct [TbitStruct](#)

### Typedefs

- typedef [Account\\_bit](#) [Acc\\_bit](#)
- typedef QList< [Account\\_bit](#) > [AccList\\_b](#)
- typedef QList< [Global\\_bit](#) > [GlobalList\\_bit](#)
- typedef QSharedPointer< [History](#) > [HistoryPtr](#)
- typedef QSharedPointer< [Object](#) > [ObjectPtr](#)
- typedef std::vector< [ObjectPtr](#) > [ObjectPtrV](#)
- typedef [Object\\_bit](#) [Obj\\_bit](#)
- typedef QSharedPointer< [Operate](#) > [OperatePtr](#)
- typedef QVector< [OperatePtr](#) > [OperatePtrList](#)

### Functions

- QDataStream & [operator>>](#) (QDataStream &s, [Global\\_bit](#) &id)
- QDataStream & [operator<<](#) (QDataStream &stream, const [History](#) &data)
- QDataStream & [operator>>](#) (QDataStream &stream, [History](#) &data)
- QDataStream & [operator<<](#) (QDataStream &stream, const [AFlib::id::Object](#) &data)
- QDataStream & [operator>>](#) (QDataStream &stream, [AFlib::id::Object](#) &data)

### 5.3.1 Typedef Documentation

#### 5.3.1.1 Acc\_bit

```
typedef Account_bit AFlib::id::Acc_bit
```

Definition at line 8 of file afdAccount.h.

#### 5.3.1.2 AccList\_b

```
typedef QList<Account_bit> AFlib::id::AccList_b
```

Definition at line 10 of file afdAccount.h.

#### 5.3.1.3 GlobalList\_bit

```
typedef QList<Global_bit> AFlib::id::GlobalList_bit
```

Definition at line 12 of file afdGlobalBit.h.

#### 5.3.1.4 HistoryPtr

```
typedef QSharedPointer<History> AFlib::id::HistoryPtr
```

Definition at line 38 of file afdHistory.h.

#### 5.3.1.5 Obj\_bit

```
typedef Object_bit AFlib::id::Obj_bit
```

Definition at line 14 of file afdObjectBit.h.

#### 5.3.1.6 ObjectPtr

```
typedef QSharedPointer<Object> AFlib::id::ObjectPtr
```

Definition at line 9 of file afldObject.h.

#### 5.3.1.7 ObjectPtrV

```
typedef std::vector<ObjectPtr> AFlib::id::ObjectPtrV
```

Definition at line 12 of file afldObject.h.

#### 5.3.1.8 OperatePtr

```
typedef QSharedPointer<Operate> AFlib::id::OperatePtr
```

Definition at line 16 of file afldOperate.h.

#### 5.3.1.9 OperatePtrList

```
typedef QVector<OperatePtr> AFlib::id::OperatePtrList
```

Definition at line 19 of file afldOperate.h.

### 5.3.2 Function Documentation

#### 5.3.2.1 operator<<() [1/3]

```
QDataStream& AFlib::id::operator<< (  
    QDataStream & s,  
    const Global_bit & id )
```

Definition at line 22 of file afldGlobalBit.cpp.

#### 5.3.2.2 operator<<() [2/3]

```
QDataStream& AFlib::id::operator<< (
    QDataStream & stream,
    const AFlib::id::Object & data )
```

Definition at line 163 of file afldObject.cpp.

#### 5.3.2.3 operator<<() [3/3]

```
QDataStream& AFlib::id::operator<< (
    QDataStream & stream,
    const History & data )
```

Definition at line 367 of file afldHistory.cpp.

#### 5.3.2.4 operator>>() [1/3]

```
QDataStream& AFlib::id::operator>> (
    QDataStream & s,
    Global_bit & id )
```

Definition at line 27 of file afldGlobalBit.cpp.

#### 5.3.2.5 operator>>() [2/3]

```
QDataStream& AFlib::id::operator>> (
    QDataStream & stream,
    AFlib::id::Object & data )
```

Definition at line 176 of file afldObject.cpp.

#### 5.3.2.6 operator>>() [3/3]

```
QDataStream& AFlib::id::operator>> (
    QDataStream & stream,
    History & data )
```

Definition at line 372 of file afldHistory.cpp.

## 5.4 AFlib::transfer Namespace Reference

### Namespaces

- [answer](#)
- [send](#)

### Classes

- class [Answer](#)
- class [Send](#)

## 5.5 AFlib::transfer::answer Namespace Reference

### Classes

- struct [DPathObjectList](#)
- struct [Object](#)

### Functions

- QDataStream & [operator<<](#) (QDataStream &stream, const [AFlib::transfer::answer::Object](#) &data)
- QDataStream & [operator>>](#) (QDataStream &stream, [AFlib::transfer::answer::Object](#) &data)
- QDataStream & [operator<<](#) (QDataStream &stream, const [AFlib::transfer::answer::DPathObjectList](#) &data)
- QDataStream & [operator>>](#) (QDataStream &stream, [AFlib::transfer::answer::DPathObjectList](#) &data)

### 5.5.1 Function Documentation

#### 5.5.1.1 [operator<<\(\)](#) [1/2]

```
QDataStream& AFlib::transfer::answer::operator<< (  
    QDataStream & stream,  
    const AFlib::transfer::answer::DPathObjectList & data )
```

Definition at line 42 of file afTransferOperateList.cpp.

#### 5.5.1.2 [operator<<\(\)](#) [2/2]

```
QDataStream& AFlib::transfer::answer::operator<< (  
    QDataStream & stream,  
    const AFlib::transfer::answer::Object & data )
```

Definition at line 32 of file afTransferOperateList.cpp.

### 5.5.1.3 operator>>() [1/2]

```
QDataStream& AFlib::transfer::answer::operator>> (
    QDataStream & stream,
    AFlib::transfer::answer::DPathObjectList & data )
```

Definition at line 47 of file afTransferOperateList.cpp.

### 5.5.1.4 operator>>() [2/2]

```
QDataStream& AFlib::transfer::answer::operator>> (
    QDataStream & stream,
    AFlib::transfer::answer::Object & data )
```

Definition at line 37 of file afTransferOperateList.cpp.

## 5.6 AFlib::transfer::send Namespace Reference

### Classes

- struct [Objects](#)
- struct [Operates](#)

### Functions

- QDataStream & [operator>>](#) (QDataStream &stream, [Objects](#) &data)
- QDataStream & [operator<<](#) (QDataStream &stream, [Objects](#) &data)
- QDataStream & [operator<<](#) (QDataStream &stream, const [AFlib::transfer::send::Operates](#) &data)
- QDataStream & [operator>>](#) (QDataStream &stream, [AFlib::transfer::send::Operates](#) &data)

### 5.6.1 Function Documentation

#### 5.6.1.1 operator<<() [1/2]

```
QDataStream& AFlib::transfer::send::operator<< (
    QDataStream & stream,
    const AFlib::transfer::send::Operates & data )
```

Definition at line 181 of file afTransferOperateList.cpp.

### 5.6.1.2 operator<<() [2/2]

```
QDataStream& AFlib::transfer::send::operator<< (
    QDataStream & stream,
    Objects & data )
```

Definition at line 173 of file afTransferOperateList.cpp.

### 5.6.1.3 operator>>() [1/2]

```
QDataStream& AFlib::transfer::send::operator>> (
    QDataStream & stream,
    AFlib::transfer::send::Operates & data )
```

Definition at line 186 of file afTransferOperateList.cpp.

### 5.6.1.4 operator>>() [2/2]

```
QDataStream& AFlib::transfer::send::operator>> (
    QDataStream & stream,
    Objects & data )
```

Definition at line 162 of file afTransferOperateList.cpp.

## 5.7 AFquick Namespace Reference

### Classes

- class [GuiApplication](#)
- class [GuiPlugin](#)
- class [GuiSize](#)
- class [MenuModel](#)
- struct [MenuSingle](#)

### Typedefs

- typedef QSharedPointer< [GuiPlugin](#) > [GuiPluginPtr](#)
- typedef QSharedPointer< [GuiSize](#) > [GuiSizePtr](#)

### Functions

- [GuiSizePtr](#) [guiSize](#) ()

## 5.7.1 Typedef Documentation

### 5.7.1.1 GuiPluginPtr

```
typedef QSharedPointer<GuiPlugin> AFquick::GuiPluginPtr
```

Definition at line 10 of file guiPlugin.h.

### 5.7.1.2 GuiSizePtr

```
typedef QSharedPointer<GuiSize> AFquick::GuiSizePtr
```

Definition at line 9 of file guiSize.h.

## 5.7.2 Function Documentation

### 5.7.2.1 guiSize()

```
AFquick::GuiSizePtr AFquick::guiSize ( )
```

Definition at line 57 of file guiSize.cpp.

## Chapter 6

# Class Documentation

### 6.1 AFaccount::Account Class Reference

```
#include <afAccount.h>
```

Inheritance diagram for AFaccount::Account:

#### Public Slots

- void [setLogin](#) (QString [login](#))

#### Public Member Functions

- [Account](#) (QObject \*parent=nullptr)
- [Account](#) (AFlib::IdObjectPtr ptr, QObject \*parent=nullptr)
- [Account](#) (const QByteArray &data, QObject \*parent=nullptr)
- bool [check](#) (QString password) const
- virtual QString [login](#) () const final
- [operator QJsonObject](#) () const
- virtual QJsonObject [toJson](#) () const override
- QByteArray [toByteArray](#) () const
- void [reset](#) ()
- [AFlib::id::AccList\\_b](#) [friendList](#) () const
- [AFlib::id::AccList\\_b](#) [groupList](#) () const

## Private Member Functions

- virtual QString [passwordHash](#) () const final
- void [addAccount](#) (AFlib::IdObjectPtr account)
- void [removeAccount](#) (AFlib::IdObjectPtr account)
- void [addGroup](#) (AFlib::IdObjectPtr account)
- void [removeGroup](#) (AFlib::IdObjectPtr account)

## Friends

- class [Storage](#)
- class [AFlib::API](#)

## Additional Inherited Members

### 6.1.1 Detailed Description

Definition at line 25 of file afAccount.h.

### 6.1.2 Constructor & Destructor Documentation

#### 6.1.2.1 Account() [1/3]

```
AFAccount::Account::Account (  
    QObject * parent = nullptr ) [explicit]
```

Definition at line 21 of file afAccount.cpp.

#### 6.1.2.2 Account() [2/3]

```
AFAccount::Account::Account (  
    AFlib::IdObjectPtr ptr,  
    QObject * parent = nullptr )
```

Definition at line 8 of file afAccount.cpp.

#### 6.1.2.3 Account() [3/3]

```
AFAccount::Account::Account (  
    const QByteArray & data,  
    QObject * parent = nullptr )
```

Definition at line 14 of file afAccount.cpp.

## 6.1.3 Member Function Documentation

### 6.1.3.1 addAccount()

```
void AFaccount::Account::addAccount (
    AFlib::IdObjectPtr account ) [private]
```

Definition at line 61 of file afAccount.cpp.

### 6.1.3.2 addGroup()

```
void AFaccount::Account::addGroup (
    AFlib::IdObjectPtr account ) [private]
```

Definition at line 73 of file afAccount.cpp.

### 6.1.3.3 check()

```
bool AFaccount::Account::check (
    QString password ) const
```

Definition at line 45 of file afAccount.cpp.

### 6.1.3.4 friendList()

```
AFlib::id::AccList_b AFaccount::Account::friendList ( ) const
```

Definition at line 116 of file afAccount.cpp.

### 6.1.3.5 groupList()

```
AFlib::id::AccList_b AFaccount::Account::groupList ( ) const
```

Definition at line 124 of file afAccount.cpp.

#### 6.1.3.6 login()

```
QString AFaccount::Account::login ( ) const [final], [virtual]
```

Definition at line 85 of file afAccount.cpp.

#### 6.1.3.7 operator QJsonObject()

```
AFaccount::Account::operator QJsonObject ( ) const
```

Definition at line 132 of file afAccount.cpp.

#### 6.1.3.8 passwordHash()

```
QString AFaccount::Account::passwordHash ( ) const [final], [private], [virtual]
```

Definition at line 56 of file afAccount.cpp.

#### 6.1.3.9 removeAccount()

```
void AFaccount::Account::removeAccount (
    AFlib::IdObjectPtr account ) [private]
```

Definition at line 67 of file afAccount.cpp.

#### 6.1.3.10 removeGroup()

```
void AFaccount::Account::removeGroup (
    AFlib::IdObjectPtr account ) [private]
```

Definition at line 79 of file afAccount.cpp.

#### 6.1.3.11 reset()

```
void AFaccount::Account::reset ( )
```

Definition at line 111 of file afAccount.cpp.

#### 6.1.3.12 setLogin

```
void AFaccount::Account::setLogin (
    QString login ) [slot]
```

Definition at line 137 of file afAccount.cpp.

#### 6.1.3.13 toByteArray()

```
QByteArray AFaccount::Account::toByteArray ( ) const
```

Definition at line 103 of file afAccount.cpp.

#### 6.1.3.14 toJson()

```
QJsonObject AFaccount::Account::toJson ( ) const [override], [virtual]
```

Reimplemented from [AFaccount::Info](#).

Definition at line 90 of file afAccount.cpp.

### 6.1.4 Friends And Related Function Documentation

#### 6.1.4.1 AFlib::API

```
friend class AFlib::API [friend]
```

Definition at line 63 of file afAccount.h.

#### 6.1.4.2 Storage

```
friend class Storage [friend]
```

Definition at line 62 of file afAccount.h.

The documentation for this class was generated from the following files:

- lib\_baseAF/include/lib\_baseAF/[afAccount.h](#)
- lib\_baseAF/account/[afAccount.cpp](#)

## 6.2 AFlib::id::Account\_bit Struct Reference

```
#include <afIdAccount.h>
```

Inheritance diagram for AFlib::id::Account\_bit:

### Public Member Functions

- [Account\\_bit](#) (quint32 id=0)
- quint32 [accountId](#) () const
- void [setAccountId](#) (quint32 id)
- void [setUserId](#) (quint32 id)
- [operator quint32](#) () const
- [AccountIdType accountIdType](#) () const
- bool [isGlobal](#) () const
- bool [isLocal](#) () const

### Static Public Member Functions

- static [Account\\_bit create](#) (const [AccountIdType](#) &type)

### Additional Inherited Members

#### 6.2.1 Detailed Description

Definition at line 22 of file `afIdAccount.h`.

#### 6.2.2 Constructor & Destructor Documentation

##### 6.2.2.1 Account\_bit()

```
AFlib::id::Account_bit::Account_bit (
    quint32 id = 0 ) [explicit]
```

Definition at line 3 of file `afIdAccount.cpp`.

## 6.2.3 Member Function Documentation

### 6.2.3.1 accountId()

```
 quint32 AFlib::id::Account_bit::accountId ( ) const
```

Definition at line 8 of file afdAccount.cpp.

### 6.2.3.2 accountType()

```
 AFlib::AccountIdType AFlib::id::Account_bit::accountType ( ) const
```

Definition at line 24 of file afdAccount.cpp.

### 6.2.3.3 create()

```
 AFlib::id::Account_bit AFlib::id::Account_bit::create (
    const AccountIdType & type ) [static]
```

Definition at line 46 of file afdAccount.cpp.

### 6.2.3.4 isGlobal()

```
 bool AFlib::id::Account_bit::isGlobal ( ) const
```

Definition at line 36 of file afdAccount.cpp.

### 6.2.3.5 isLocal()

```
 bool AFlib::id::Account_bit::isLocal ( ) const
```

Definition at line 41 of file afdAccount.cpp.

### 6.2.3.6 operator quint32()

```
AFLib::id::Account_bit::operator quint32 ( ) const
```

Definition at line 61 of file `afldAccount.cpp`.

### 6.2.3.7 setAccountId()

```
void AFLib::id::Account_bit::setAccountId (
    quint32 id )
```

Definition at line 13 of file `afldAccount.cpp`.

### 6.2.3.8 setUserId()

```
void AFLib::id::Account_bit::setUserId (
    quint32 id )
```

Definition at line 18 of file `afldAccount.cpp`.

The documentation for this struct was generated from the following files:

- `lib_baseAF/include/lib_baseAF/afldAccount.h`
- `lib_baseAF/base/afldAccount.cpp`

## 6.3 AFLib::Storage::AccountStorage Struct Reference

### Public Member Functions

- void `addPlugin` (quint8 id)

### Public Attributes

- `id::Account_bit` `accountBit`
- `std::vector< PluginStorage >` `pluginList`

### 6.3.1 Detailed Description

Definition at line 80 of file `afStorage.h`.

## 6.3.2 Member Function Documentation

### 6.3.2.1 addPlugin()

```
void Storage::AccountStorage::addPlugin (
    quint8 id )
```

Definition at line 554 of file afStorage.cpp.

## 6.3.3 Member Data Documentation

### 6.3.3.1 accountBit

```
id::Account_bit AFlib::Storage::AccountStorage::accountBit
```

Definition at line 81 of file afStorage.h.

### 6.3.3.2 pluginList

```
std::vector<PluginStorage> AFlib::Storage::AccountStorage::pluginList
```

Definition at line 83 of file afStorage.h.

The documentation for this struct was generated from the following files:

- lib\_baseAF/include/lib\_baseAF/afStorage.h
- lib\_baseAF/tool/afStorage.cpp

## 6.4 AFlib::transfer::Answer Class Reference

```
#include <afTransferOperateList.h>
```

Inheritance diagram for AFlib::transfer::Answer:

## Public Member Functions

- [Answer](#) ()=default
- [Answer](#) (const QByteArray &data)
- void [addNewGlobalId](#) (QStringList dPath, [FileType](#) fileType, [id::Account\\_bit](#) owner, [id::Object\\_bit](#) old, [id::Object\\_bit](#) new\_)
- std::optional< [id::Global\\_bit](#) > [isOldIdPresent](#) ([id::Global\\_bit](#) localId, QStringList dPath, [FileType](#) type) const
- [operator QByteArray](#) () const
- QByteArray [getData](#) () const

### 6.4.1 Detailed Description

Definition at line 42 of file afTransferOperateList.h.

### 6.4.2 Constructor & Destructor Documentation

#### 6.4.2.1 Answer() [1/2]

```
AFlib::transfer::Answer::Answer ( ) [explicit], [default]
```

#### 6.4.2.2 Answer() [2/2]

```
AFlib::transfer::Answer::Answer (
    const QByteArray & data )
```

Definition at line 53 of file afTransferOperateList.cpp.

### 6.4.3 Member Function Documentation

#### 6.4.3.1 addNewGlobalId()

```
void AFlib::transfer::Answer::addNewGlobalId (
    QStringList dPath,
    FileType fileType,
    id::Account_bit owner,
    id::Object_bit old,
    id::Object_bit new_ )
```

Definition at line 59 of file afTransferOperateList.cpp.

### 6.4.3.2 getData()

```
QByteArray AFlib::transfer::Answer::getData ( ) const
```

Definition at line 94 of file afTransferOperateList.cpp.

### 6.4.3.3 isOldIdPresent()

```
std::optional< AFlib::id::Global_bit > AFlib::transfer::Answer::isOldIdPresent (
    id::Global_bit localId,
    QStringList dPath,
    FileType type ) const
```

Definition at line 79 of file afTransferOperateList.cpp.

### 6.4.3.4 operator QByteArray()

```
AFlib::transfer::Answer::operator QByteArray ( ) const
```

Definition at line 99 of file afTransferOperateList.cpp.

The documentation for this class was generated from the following files:

- lib\_baseAF/include/lib\_baseAF/afTransferOperateList.h
- lib\_baseAF/tool/afTransferOperateList.cpp

## 6.5 AFlib::API Class Reference

```
#include <afAPI.h>
```

Inheritance diagram for AFlib::API:

### Signals

- void [onlineChanged](#) (bool [online](#))

## Public Member Functions

- [API](#) (QObject \*parent=nullptr)
- void [login](#) (QString login, QString password)
- void [registrate](#) (AFaccount::AccountPtr account)
- void [remindMyLogin](#) (QString login)
- void [remindMyPassword](#) (QString login)
- void [addAccount](#) (QString login)
- void [addAccount](#) (IdAccount\_bit id)
- void [updateObjects](#) ()
- bool [online](#) () const

## Static Public Member Functions

- static [ApiPtr instance](#) ()

## Static Public Attributes

- static QString [defaultLink](#) = QString("127.0.0.1:55023")

## Properties

- bool [online](#)

## Private Member Functions

- void [readServerAnswer](#) (QNetworkReply \*reply)
- void [post](#) ([RequestType](#) type, QByteArray data, bool isData=false)
- void [get](#) ([RequestType](#) type, bool isData=false)
- void [sendPing](#) ()
- void [setOnlineStatus](#) (bool is\_online)

## Private Attributes

- QMap< [RequestType](#), [RequestStatus](#) > [m\\_requestStatus](#)
- bool [m\\_online](#)
- QTimer \* [m\\_pingTimer](#)

### 6.5.1 Detailed Description

Definition at line 45 of file afAPI.h.

### 6.5.2 Constructor & Destructor Documentation

### 6.5.2.1 API()

```
AFlib::API::API (
    QObject * parent = nullptr ) [explicit]
```

Definition at line 11 of file afAPI.cpp.

## 6.5.3 Member Function Documentation

### 6.5.3.1 addAccount() [1/2]

```
void AFlib::API::addAccount (
    IdAccount_bit id )
```

Definition at line 177 of file afAPI.cpp.

### 6.5.3.2 addAccount() [2/2]

```
void AFlib::API::addAccount (
    QString login )
```

Definition at line 165 of file afAPI.cpp.

### 6.5.3.3 get()

```
void AFlib::API::get (
    RequestType type,
    bool isData = false ) [private]
```

Definition at line 104 of file afAPI.cpp.

### 6.5.3.4 instance()

```
AFlib::ApiPtr AFlib::API::instance ( ) [static]
```

Definition at line 128 of file afAPI.cpp.

#### 6.5.3.5 login()

```
void AFlib::API::login (
    QString login,
    QString password )
```

Definition at line 133 of file afAPI.cpp.

#### 6.5.3.6 online()

```
bool AFlib::API::online ( ) const
```

#### 6.5.3.7 onlineChanged

```
void AFlib::API::onlineChanged (
    bool online ) [signal]
```

#### 6.5.3.8 post()

```
void AFlib::API::post (
    RequestType type,
    QByteArray data,
    bool isData = false ) [private]
```

Definition at line 93 of file afAPI.cpp.

#### 6.5.3.9 readServerAnswer()

```
void AFlib::API::readServerAnswer (
    QNetworkReply * reply ) [private]
```

Definition at line 20 of file afAPI.cpp.

#### 6.5.3.10 registrate()

```
void AFlib::API::registrate (
    AFaccount::AccountPtr account )
```

Definition at line 141 of file afAPI.cpp.

#### 6.5.3.11 remindMyLogin()

```
void AFlib::API::remindMyLogin (
    QString login )
```

Definition at line 149 of file afAPI.cpp.

#### 6.5.3.12 remindMyPassword()

```
void AFlib::API::remindMyPassword (
    QString login )
```

Definition at line 157 of file afAPI.cpp.

#### 6.5.3.13 sendPing()

```
void AFlib::API::sendPing ( ) [private]
```

Definition at line 112 of file afAPI.cpp.

#### 6.5.3.14 setOnlineStatus()

```
void AFlib::API::setOnlineStatus (
    bool is_online ) [private]
```

Definition at line 118 of file afAPI.cpp.

#### 6.5.3.15 updateObjects()

```
void AFlib::API::updateObjects ( )
```

Definition at line 185 of file afAPI.cpp.

### 6.5.4 Member Data Documentation

#### 6.5.4.1 defaultLink

```
QString AFlib::API::defaultLink = QString("127.0.0.1:55023") [static]
```

Definition at line 52 of file afAPI.h.

#### 6.5.4.2 m\_online

```
bool AFlib::API::m_online [private]
```

Definition at line 76 of file afAPI.h.

#### 6.5.4.3 m\_pingTimer

```
QTimer* AFlib::API::m_pingTimer [private]
```

Definition at line 77 of file afAPI.h.

#### 6.5.4.4 m\_requestStatus

```
QMap<RequestType, RequestStatus> AFlib::API::m_requestStatus [private]
```

Definition at line 73 of file afAPI.h.

### 6.5.5 Property Documentation

#### 6.5.5.1 online

```
bool AFlib::API::online [read]
```

Definition at line 48 of file afAPI.h.

The documentation for this class was generated from the following files:

- lib\_baseAF/include/lib\_baseAF/[afAPI.h](#)
- lib\_baseAF/base/[afAPI.cpp](#)

## 6.6 AFlib::Dir Class Reference

```
#include <afDir.h>
```

Inheritance diagram for AFlib::Dir:

### Signals

### 6.6.1 Detailed Description

Definition at line 19 of file afDir.h.

### 6.6.2 Constructor & Destructor Documentation

#### 6.6.2.1 Dir()

```
Dir::Dir (
    QObject * parent = nullptr ) [explicit]
```

Definition at line 11 of file afDir.cpp.

### 6.6.3 Member Function Documentation

#### 6.6.3.1 app()

```
virtual QDir AFlib::Dir::app ( ) const [inline], [final], [virtual]
```

Definition at line 45 of file afDir.h.

#### 6.6.3.2 cdDirectory() [1/2]

```
bool Dir::cdDirectory (
    QDir & dir,
    QString name ) [static]
```

Definition at line 187 of file afDir.cpp.

#### 6.6.3.3 cdDirectory() [2/2]

```
bool Dir::cdDirectory (
    QDir & dir,
    quint32 name,
    uint size ) [static]
```

Definition at line 199 of file afDir.cpp.

#### 6.6.3.4 config()

```
virtual QDir AFlib::Dir::config ( ) const [inline], [final], [virtual]
```

Definition at line 46 of file afDir.h.

#### 6.6.3.5 cookies()

```
virtual QDir AFlib::Dir::cookies ( ) const [inline], [final], [virtual]
```

Definition at line 47 of file afDir.h.

#### 6.6.3.6 cpDirectory()

```
void Dir::cpDirectory (
    QString from,
    QString to ) [static]
```

Definition at line 204 of file afDir.cpp.

#### 6.6.3.7 init()

```
void Dir::init (
    bool useCurrentFolder = false )
```

Definition at line 17 of file afDir.cpp.

#### 6.6.3.8 initStandartPath()

```
void Dir::initStandartPath ( )
```

Definition at line 100 of file afDir.cpp.

#### 6.6.3.9 instance()

```
QSharedPointer< AFlib::Dir > Dir::instance ( ) [static]
```

Definition at line 135 of file afDir.cpp.

#### 6.6.3.10 libraries()

```
virtual QDir AFlib::Dir::libraries ( ) const [inline], [final], [virtual]
```

Definition at line 49 of file afDir.h.

#### 6.6.3.11 pluginData()

```
QDir Dir::pluginData (
    QString plugin ) const [virtual]
```

Definition at line 230 of file afDir.cpp.

#### 6.6.3.12 plugins()

```
virtual QDir AFlib::Dir::plugins ( ) const [inline], [final], [virtual]
```

Definition at line 50 of file afDir.h.

#### 6.6.3.13 setUserConfig()

```
void Dir::setUserConfig (
    QDir userConfig ) [private]
```

Definition at line 160 of file afDir.cpp.

#### 6.6.3.14 setUserData()

```
void Dir::setUserData (
    QDir userData ) [private]
```

Definition at line 169 of file afDir.cpp.

#### 6.6.3.15 setUserDir()

```
void Dir::setUserDir (
    QDir userDir ) [private]
```

Definition at line 178 of file afDir.cpp.

#### 6.6.3.16 storage()

```
virtual QDir AFlib::Dir::storage ( ) const [inline], [final], [virtual]
```

Definition at line 48 of file afDir.h.

#### 6.6.3.17 switchToUser

```
void Dir::switchToUser (
    QString name ) [private], [slot]
```

Definition at line 143 of file afDir.cpp.

#### 6.6.3.18 translates()

```
virtual QDir AFlib::Dir::translates ( ) const [inline], [final], [virtual]
```

Definition at line 51 of file afDir.h.

#### 6.6.3.19 userConfig()

```
virtual QDir AFlib::Dir::userConfig ( ) const [inline], [final], [virtual]
```

Definition at line 53 of file afDir.h.

#### 6.6.3.20 userConfigChanged

```
void AFlib::Dir::userConfigChanged (
    QDir userConfig ) [signal]
```

#### 6.6.3.21 userData()

```
virtual QDir AFlib::Dir::userData ( ) const [inline], [final], [virtual]
```

Definition at line 54 of file afDir.h.

#### 6.6.3.22 userDataChanged

```
void AFlib::Dir::userDataChanged (
    QDir userData ) [signal]
```

#### 6.6.3.23 userDir()

```
virtual QDir AFlib::Dir::userDir ( ) const [inline], [final], [virtual]
```

Definition at line 55 of file afDir.h.

#### 6.6.3.24 userDirChanged

```
void AFlib::Dir::userDirChanged (
    QDir userDir ) [signal]
```

#### 6.6.3.25 users()

```
virtual QDir AFlib::Dir::users ( ) const [inline], [final], [virtual]
```

Definition at line 52 of file afDir.h.

### 6.6.4 Member Data Documentation

#### 6.6.4.1 m\_app

```
QDir AFlib::Dir::m_app [private]
```

Definition at line 67 of file afDir.h.

#### 6.6.4.2 m\_config

```
QDir AFlib::Dir::m_config [private]
```

Definition at line 68 of file afDir.h.

#### 6.6.4.3 m\_cookies

```
QDir AFlib::Dir::m_cookies [private]
```

Definition at line 69 of file afDir.h.

#### 6.6.4.4 m\_libraries

```
QDir AFlib::Dir::m_libraries [private]
```

Definition at line 70 of file afDir.h.

#### 6.6.4.5 m\_plugins

```
QDir AFlib::Dir::m_plugins [private]
```

Definition at line 71 of file afDir.h.

#### 6.6.4.6 m\_storage

```
QDir AFlib::Dir::m_storage [private]
```

Definition at line 72 of file afDir.h.

#### 6.6.4.7 m\_translates

```
QDir AFlib::Dir::m_translates [private]
```

Definition at line 73 of file afDir.h.

#### 6.6.4.8 m\_userConfig

```
QDir AFlib::Dir::m_userConfig [private]
```

Definition at line 75 of file afDir.h.

#### 6.6.4.9 m\_userData

```
QDir AFlib::Dir::m_userData [private]
```

Definition at line 76 of file afDir.h.

#### 6.6.4.10 m\_userDir

```
QDir AFlib::Dir::m_userDir [private]
```

Definition at line 77 of file afDir.h.

#### 6.6.4.11 m\_users

`QDir AFlib::Dir::m_users [private]`

Definition at line 74 of file afDir.h.

### 6.6.5 Property Documentation

#### 6.6.5.1 app

`QDir AFlib::Dir::app [read]`

Definition at line 22 of file afDir.h.

#### 6.6.5.2 config

`QDir AFlib::Dir::config [read]`

Definition at line 23 of file afDir.h.

#### 6.6.5.3 cookies

`QDir AFlib::Dir::cookies [read]`

Definition at line 24 of file afDir.h.

#### 6.6.5.4 libraries

`QDir AFlib::Dir::libraries [read]`

Definition at line 25 of file afDir.h.

#### 6.6.5.5 plugins

`QDir AFlib::Dir::plugins [read]`

Definition at line 26 of file afDir.h.

#### 6.6.5.6 storage

```
QDir AFlib::Dir::storage [read]
```

Definition at line 27 of file afDir.h.

#### 6.6.5.7 translates

```
QDir AFlib::Dir::translates [read]
```

Definition at line 28 of file afDir.h.

#### 6.6.5.8 userConfig

```
QDir AFlib::Dir::userConfig [read]
```

Definition at line 31 of file afDir.h.

#### 6.6.5.9 userData

```
QDir AFlib::Dir::userData [read]
```

Definition at line 32 of file afDir.h.

#### 6.6.5.10 userDir

```
QDir AFlib::Dir::userDir [read]
```

Definition at line 33 of file afDir.h.

#### 6.6.5.11 users

```
QDir AFlib::Dir::users [read]
```

Definition at line 29 of file afDir.h.

The documentation for this class was generated from the following files:

- [lib\\_baseAF/include/lib\\_baseAF/afDir.h](#)
- [lib\\_baseAF/tool/afDir.cpp](#)
- [lib\\_baseAF/tool/afDir2.cpp](#)

## 6.7 AFlib::transfer::answer::DPathObjectList Struct Reference

```
#include <afTransferOperateList.h>
```

Inheritance diagram for AFlib::transfer::answer::DPathObjectList:

### Public Attributes

- QStringList [dPath](#)
- [FileType](#) [fileType](#)

### Friends

- QDataStream & [operator<<](#) (QDataStream &stream, const [DPathObjectList](#) &data)
- QDataStream & [operator>>](#) (QDataStream &stream, [DPathObjectList](#) &data)

### 6.7.1 Detailed Description

Definition at line 34 of file afTransferOperateList.h.

### 6.7.2 Friends And Related Function Documentation

#### 6.7.2.1 operator<<

```
QDataStream& operator<< (
    QDataStream & stream,
    const DPathObjectList & data ) [friend]
```

Definition at line 42 of file afTransferOperateList.cpp.

#### 6.7.2.2 operator>>

```
QDataStream& operator>> (
    QDataStream & stream,
    DPathObjectList & data ) [friend]
```

Definition at line 47 of file afTransferOperateList.cpp.

## 6.7.3 Member Data Documentation

### 6.7.3.1 dPath

`QStringList AFlib::transfer::answer::DPathObjectList::dPath`

Definition at line 35 of file `afTransferOperateList.h`.

### 6.7.3.2 fileType

`FileType AFlib::transfer::answer::DPathObjectList::fileType`

Definition at line 36 of file `afTransferOperateList.h`.

The documentation for this struct was generated from the following file:

- `lib_baseAF/include/lib_baseAF/afTransferOperateList.h`

## 6.8 AFlib::File Class Reference

```
#include <afFile.h>
```

### 6.8.1 Detailed Description

Definition at line 17 of file afFile.h.

### 6.8.2 Constructor & Destructor Documentation

#### 6.8.2.1 File() [1/2]

```
AFlib::File::File (
    QString dPath,
    AFlib::FileType type = AFlib::FileType::Data )
```

Definition at line 8 of file afFile.cpp.

#### 6.8.2.2 File() [2/2]

```
AFlib::File::File (
    QStringList list,
    AFlib::FileType type = AFlib::FileType::Data )
```

Definition at line 16 of file afFile.cpp.

### 6.8.2.3 ~File()

```
AFlib::File::~~File ( ) [virtual]
```

Definition at line 24 of file afFile.cpp.

## 6.8.3 Member Function Documentation

### 6.8.3.1 dPath()

```
QStringList AFlib::File::dPath ( ) const
```

Definition at line 90 of file afFile.cpp.

### 6.8.3.2 dType()

```
AFlib::FileType AFlib::File::dType ( ) const
```

Definition at line 95 of file afFile.cpp.

### 6.8.3.3 exists()

```
bool AFlib::File::exists ( )
```

Definition at line 64 of file afFile.cpp.

### 6.8.3.4 getDPath() [1/3]

```
QString AFlib::File::getDPath (
    const QDir & fullPath ) [static]
```

Definition at line 179 of file afFile.cpp.

#### 6.8.3.5 getDPath() [2/3]

```
QString AFlib::File::getDPath (
    const QString & fullPath ) [static]
```

Definition at line 160 of file afFile.cpp.

#### 6.8.3.6 getDPath() [3/3]

```
QString AFlib::File::getDPath (
    const QStringList & list ) [static]
```

Definition at line 155 of file afFile.cpp.

#### 6.8.3.7 getDPathList()

```
QStringList AFlib::File::getDPathList (
    const QString & dPath ) [static]
```

Definition at line 172 of file afFile.cpp.

#### 6.8.3.8 getFileTypeName()

```
QString AFlib::File::getFileTypeName (
    FileType type ) [static]
```

Definition at line 116 of file afFile.cpp.

#### 6.8.3.9 getFullDir()

```
QDir AFlib::File::getFullDir (
    const QStringList & list,
    bool isFileNameIsLast = true ) [static]
```

Definition at line 128 of file afFile.cpp.

#### 6.8.3.10 getFullPath() [1/2]

```
QString AFlib::File::getFullPath (
    const QString & dPath ) [static]
```

Definition at line 150 of file afFile.cpp.

#### 6.8.3.11 getFullPath() [2/2]

```
QString AFlib::File::getFullPath (
    const QStringList & list,
    AFlib::FileType type = AFlib::FileType::Data ) [static]
```

Definition at line 144 of file afFile.cpp.

#### 6.8.3.12 getFullTypeList()

```
QStringList AFlib::File::getFullTypeList ( ) [static]
```

Definition at line 105 of file afFile.cpp.

#### 6.8.3.13 isOpen()

```
bool AFlib::File::isOpen ( ) const
```

Definition at line 85 of file afFile.cpp.

#### 6.8.3.14 openRead()

```
bool AFlib::File::openRead ( )
```

Definition at line 30 of file afFile.cpp.

#### 6.8.3.15 openWrite()

```
bool AFlib::File::openWrite ( )
```

Definition at line 50 of file afFile.cpp.

#### 6.8.3.16 readAll()

```
QByteArray AFlib::File::readAll ( )
```

Definition at line 69 of file afFile.cpp.

#### 6.8.3.17 rename()

```
bool AFlib::File::rename (
    QDir dir,
    QString file,
    QString newName ) [static]
```

Definition at line 100 of file afFile.cpp.

#### 6.8.3.18 stream()

```
QDataStream & AFlib::File::stream ( )
```

Definition at line 80 of file afFile.cpp.

#### 6.8.3.19 writeAll()

```
bool AFlib::File::writeAll (
    const QByteArray & data )
```

Definition at line 74 of file afFile.cpp.

### 6.8.4 Member Data Documentation

#### 6.8.4.1 m\_file

```
QFile* AFlib::File::m_file [private]
```

Definition at line 52 of file afFile.h.

#### 6.8.4.2 m\_stream

```
QDataStream AFlib::File::m_stream [private]
```

Definition at line 49 of file afFile.h.

#### 6.8.4.3 p\_dPath

```
QStringList AFlib::File::p_dPath [private]
```

Definition at line 50 of file afFile.h.

#### 6.8.4.4 p\_fileType

```
AFlib::FileType AFlib::File::p_fileType [private]
```

Definition at line 51 of file afFile.h.

The documentation for this class was generated from the following files:

### 6.9.1 Detailed Description

Definition at line 13 of file afFunction.h.

## 6.9.2 Constructor & Destructor Documentation

### 6.9.2.1 Function()

```
Function::Function (
    QObject * parent = nullptr ) [explicit]
```

Definition at line 9 of file afFunction.cpp.

## 6.9.3 Member Function Documentation

### 6.9.3.1 digitToString()

```
QString Function::digitToString (
    double number,
    int symbolAfterPoint = 3 ) [static]
```

Definition at line 102 of file afFunction.cpp.

### 6.9.3.2 filePath()

```
QPair< bool, QString > Function::filePath (
    QString name,
    QDir dir = QDir::current() ) [static]
```

Definition at line 157 of file afFunction.cpp.

### 6.9.3.3 findMaxElement()

```
template<typename Return_arg , unsigned size>
static std::pair<unsigned, Return_arg> AFlib::Function::findMaxElement (
    std::array< Return_arg, size > array ) [inline], [static]
```

Definition at line 37 of file afFunction.h.

### 6.9.3.4 findMaxIndexList()

```
template<typename Return_arg , unsigned size>
static std::list<unsigned> AFlib::Function::findMaxIndexList (
    std::array< Return_arg, size > array ) [inline], [static]
```

Definition at line 63 of file afFunction.h.

### 6.9.3.5 findMinElement()

```
template<typename Return_arg , unsigned size>
static std::pair<unsigned, Return_arg> AFlib::Function::findMinElement (
    std::array< Return_arg, size > array ) [inline], [static]
```

Definition at line 50 of file afFunction.h.

### 6.9.3.6 findMinIndexList()

```
template<typename Return_arg , unsigned size>
static std::list<unsigned> AFlib::Function::findMinIndexList (
    std::array< Return_arg, size > array ) [inline], [static]
```

Definition at line 77 of file afFunction.h.

#### 6.9.3.7 library()

```
QSharedPointer< QLibrary > Function::library (
    QString name,
    QDir dir = QDir::current(),
    QObject * parent = nullptr ) [static]
```

Definition at line 14 of file afFunction.cpp.

#### 6.9.3.8 libraryName()

```
QString Function::libraryName (
    QString libraryName ) [static]
```

Definition at line 147 of file afFunction.cpp.

#### 6.9.3.9 libraryPath()

```
QPair< bool, QString > Function::libraryPath (
    QString name,
    QDir dir = QDir::current() ) [static]
```

Definition at line 168 of file afFunction.cpp.

#### 6.9.3.10 nullDateTime()

```
QDateTime Function::nullDateTime ( ) [static]
```

Definition at line 138 of file afFunction.cpp.

#### 6.9.3.11 pluginLoader()

```
QSharedPointer< QPluginLoader > Function::pluginLoader (
    QString name,
    QDir dir = QDir::current(),
    QObject * parent = nullptr ) [static]
```

Definition at line 24 of file afFunction.cpp.

### 6.9.3.12 randomInt()

```
int Function::randomInt (
    int from,
    int to ) [static]
```

Definition at line 130 of file afFunction.cpp.

### 6.9.3.13 stringToDigit()

```
QString Function::stringToDigit (
    QString text ) [static]
```

Definition at line 34 of file afFunction.cpp.

### 6.9.3.14 toString()

```
std::string Function::toString (
    uint number,
    uchar numeral_system = 1,
    char size = -1,
    uchar separate = 4,
    bool showNS = true ) [static]
```

[Function::toString.](#)

#### Parameters

<i>number</i>	-
<i>numeral_system</i>	-
<i>size</i>	- , -1
<i>separate</i>	- , 4
<i>showNS</i>	-

#### Returns

[ 2] 1110

Definition at line 64 of file afFunction.cpp.

The documentation for this class was generated from the following files:

Definition at line 18 of file `afIdGlobalBit.h`.

#### 6.10.2 Constructor & Destructor Documentation

##### 6.10.2.1 [Global\\_bit\(\)](#) [1/2]

```
AFlib::id::Global_bit::Global_bit (
    Account\_bit owner,
    Object\_bit object )
```

Definition at line 4 of file `afIdGlobalBit.cpp`.

##### 6.10.2.2 [Global\\_bit\(\)](#) [2/2]

```
AFlib::id::Global_bit::Global_bit (
    quint64 number )
```

Definition at line 10 of file `afIdGlobalBit.cpp`.

### 6.10.3 Member Function Documentation

#### 6.10.3.1 toNumber()

```
quint64 AFlib::id::Global_bit::toNumber ( ) const
```

Definition at line 16 of file afldGlobalBit.cpp.

### 6.10.4 Friends And Related Function Documentation

#### 6.10.4.1 operator<<

```
QDataStream& operator<< (  
    QDataStream & s,  
    const Global_bit & id ) [friend]
```

Definition at line 22 of file afldGlobalBit.cpp.

#### 6.10.4.2 operator==

```
bool operator== (  
    const Global_bit & l,  
    const Global_bit & r ) [friend]
```

Definition at line 28 of file afldGlobalBit.h.

#### 6.10.4.3 operator>>

```
QDataStream& operator>> (  
    QDataStream & s,  
    Global_bit & id ) [friend]
```

Definition at line 27 of file afldGlobalBit.cpp.

### 6.10.5 Member Data Documentation

### 6.10.5.1 objectId

`Object_bit` `AFlib::id::Global_bit::objectId`

Definition at line 21 of file `afldGlobalBit.h`.

### 6.10.5.2 ownerId

`Account_bit` `AFlib::id::Global_bit::ownerId`

Definition at line 20 of file `afldGlobalBit.h`.

The documentation for this struct was generated from the following files:

- `lib_baseAF/include/lib_baseAF/afldGlobalBit.h`
- `lib_baseAF/base/afldGlobalBit.cpp`

## 6.11 AFaccount::Group Class Reference

```
#include <afAccountGroup.h>
```

Inheritance diagram for `AFaccount::Group`:

### Public Member Functions

- `Group` (`QObject *parent=nullptr`)
- `Group` (`AFlib::IdObjectPtr ptr, QObject *parent=nullptr`)
- `InfoPtrList userList` () const
- `InfoPtrList ownerList` () const

Definition at line 23 of file [afAccountGroup.cpp](#).

### 6.11.3 Member Function Documentation

#### 6.11.3.1 addAccount() [1/2]

```
void Group::addAccount (  
    AFIdObject\_bit account,  
    AccessType access )
```

Definition at line 54 of file [afAccountGroup.cpp](#).

### 6.11.3.2 addAccount() [2/2]

```
void Group::addAccount (
    InfoPtr account,
    AccessType access )
```

Definition at line 39 of file afAccountGroup.cpp.

### 6.11.3.3 changeAccess() [1/2]

```
void Group::changeAccess (
    AFIdObject_bit account,
    AccessType newAccess )
```

Definition at line 66 of file afAccountGroup.cpp.

### 6.11.3.4 changeAccess() [2/2]

```
void Group::changeAccess (
    InfoPtr account,
    AccessType newAccess )
```

Definition at line 49 of file afAccountGroup.cpp.

### 6.11.3.5 creatorList()

```
InfoPtrList Group::creatorList ( ) const
```

Definition at line 31 of file afAccountGroup.cpp.

### 6.11.3.6 creatorNameList()

```
QStringList Group::creatorNameList ( ) const
```

Definition at line 36 of file afAccountGroup.cpp.

#### 6.11.3.7 getByType()

```
InfoPtrList Group::getByType (
    AccessType type,
    bool inheritType = true ) const [private]
```

Definition at line 72 of file afAccountGroup.cpp.

#### 6.11.3.8 getNameByType()

```
QStringList Group::getNameByType (
    AccessType type,
    bool inheritType = true ) const [private]
```

Definition at line 84 of file afAccountGroup.cpp.

#### 6.11.3.9 moderatorList()

```
InfoPtrList Group::moderatorList ( ) const
```

Definition at line 32 of file afAccountGroup.cpp.

#### 6.11.3.10 moderatorNameList()

```
QStringList Group::moderatorNameList ( ) const
```

Definition at line 37 of file afAccountGroup.cpp.

#### 6.11.3.11 ownerList()

```
InfoPtrList Group::ownerList ( ) const
```

Definition at line 30 of file afAccountGroup.cpp.

#### 6.11.3.12 ownerNameList()

```
QStringList Group::ownerNameList ( ) const
```

Definition at line 35 of file afAccountGroup.cpp.

**6.11.3.13 removeAccount()** [1/2]

```
void Group::removeAccount (
    AFIdObject_bit account,
    AccessType access )
```

Definition at line 60 of file afAccountGroup.cpp.

**6.11.3.14 removeAccount()** [2/2]

```
void Group::removeAccount (
    InfoPtr account,
    AccessType access )
```

Definition at line 44 of file afAccountGroup.cpp.

**6.11.3.15 userList()**

```
InfoPtrList Group::userList ( ) const
```

Definition at line 29 of file afAccountGroup.cpp.

**6.11.3.16 userNameList()**

```
QStringList Group::userNameList ( ) const
```

Definition at line 34 of file afAccountGroup.cpp.

**6.11.4 Member Data Documentation****6.11.4.1 m\_userList**

```
QMap<InfoPtr, AccessType> AFaccount::Group::m_userList [private]
```

Definition at line 56 of file afAccountGroup.h.

The documentation for this class was generated from the following files:

- lib\_baseAF/include/lib\_baseAF/afAccountGroup.h
- lib\_baseAF/account/afAccountGroup.cpp

## 6.12 AFquick::GuiApplication Class Reference

```
void AFquick::GuiApplication::monomenuChanged (
    bool monomenu ) [signal]
```

### 6.12.3.11 monoobject()

```
virtual bool AFquick::GuiApplication::monoobject ( ) const [final], [virtual]
```

### 6.12.3.12 monoobjectChanged

```
void AFquick::GuiApplication::monoobjectChanged (
    bool monoobject ) [signal]
```

### 6.12.3.13 portrait()

```
virtual bool AFquick::GuiApplication::portrait ( ) const [final], [virtual]
```

#### 6.12.3.14 portraitChanged

```
void AFquick::GuiApplication::portraitChanged (
    bool portrait ) [signal]
```

#### 6.12.3.15 quit()

```
void AFquick::GuiApplication::quit ( )
```

Definition at line 85 of file guiApplication.cpp.

#### 6.12.3.16 setAFaccountFlag()

```
void AFquick::GuiApplication::setAFaccountFlag (
    bool isUseAFaccount )
```

Definition at line 47 of file guiApplication.cpp.

#### 6.12.3.17 setContentUrl()

```
bool AFquick::GuiApplication::setContentUrl (
    QUrl url ) [private]
```

Definition at line 198 of file guiApplication.cpp.

#### 6.12.3.18 setContextProperty() [1/2]

```
void AFquick::GuiApplication::setContextProperty (
    QString name,
    QObject * object )
```

Definition at line 144 of file guiApplication.cpp.

#### 6.12.3.19 setContextProperty() [2/2]

```
void AFquick::GuiApplication::setContextProperty (
    QString name,
    QVariant variant )
```

Definition at line 149 of file guiApplication.cpp.

### 6.12.3.20 setCurrentPlugin()

```
bool AFquick::GuiApplication::setCurrentPlugin (
    const QString & name )
```

Definition at line 154 of file guiApplication.cpp.

### 6.12.3.21 setMainQml()

```
void AFquick::GuiApplication::setMainQml (
    QString path )
```

Definition at line 95 of file guiApplication.cpp.

### 6.12.3.22 setMainQmlUrl()

```
void AFquick::GuiApplication::setMainQmlUrl (
    QUrl url )
```

Definition at line 90 of file guiApplication.cpp.

### 6.12.3.23 setMonomenu() [1/2]

```
void AFquick::GuiApplication::setMonomenu (
    QHash< QString, QString > hash )
```

Definition at line 109 of file guiApplication.cpp.

### 6.12.3.24 setMonomenu() [2/2]

```
void AFquick::GuiApplication::setMonomenu (
    QStringList list )
```

Definition at line 100 of file guiApplication.cpp.

### 6.12.3.25 show()

```
void AFquick::GuiApplication::show ( )
```

Definition at line 74 of file guiApplication.cpp.

## 6.12.4 Member Data Documentation

### 6.15.1 Detailed Description

Definition at line 46 of file `afIdHistory.h`.

### 6.15.2 Constructor & Destructor Documentation

#### 6.15.2.1 History()

```
AFlib::id::History::History ( ) [explicit]
```

Definition at line 5 of file `afIdHistory.cpp`.

### 6.15.3 Member Function Documentation

#### 6.15.3.1 addOperate() [1/8]

```
void AFlib::id::History::addOperate (
    Attribute attributeKey,
    QVariant value,
    Account_bit userId,
    HIdType history = HIdType::AddLine,
    SIdType saved = SIdType::Local,
    QDateTime dTime = QDateTime::currentDateTime() )
```

Definition at line 225 of file afldHistory.cpp.

#### 6.15.3.2 addOperate() [2/8]

```
void AFlib::id::History::addOperate (
    Attribute attributeKey,
    QVariant value,
    quint32 userId,
    quint8 historyId,
    quint8 savedId,
    QDateTime dTime = QDateTime::currentDateTime() )
```

Definition at line 231 of file afldHistory.cpp.

#### 6.15.3.3 addOperate() [3/8]

```
void AFlib::id::History::addOperate (
    const QByteArray & data )
```

Definition at line 205 of file afldHistory.cpp.

#### 6.15.3.4 addOperate() [4/8]

```
template<typename K >
void AFlib::id::History::addOperate (
    K valueKey,
    QVariant value,
    Account_bit userId,
    HistoryIdType history,
    SavedIdType saved,
    QDateTime dTime = QDateTime::currentDateTime() ) [inline]
```

Definition at line 132 of file afldHistory.h.

#### 6.15.3.5 addOperate() [5/8]

```
template<typename K >
void AFlib::id::History::addOperate (
    K valueKey,
    QVariant value,
    quint32 userId,
    quint8 historyId,
    quint8 savedId,
    QDateTime dTime = QDateTime::currentDateTime() ) [inline]
```

Definition at line 140 of file afldHistory.h.

#### 6.15.3.6 addOperate() [6/8]

```
void AFlib::id::History::addOperate (
    Operate id,
    bool saveToStorage = true )
```

Definition at line 335 of file afldHistory.cpp.

#### 6.15.3.7 addOperate() [7/8]

```
void AFlib::id::History::addOperate (
    OperatePtr id,
    bool saveToStorage = true,
    bool isId = false )
```

Definition at line 341 of file afldHistory.cpp.

#### 6.15.3.8 addOperate() [8/8]

```
void AFlib::id::History::addOperate (
    quint16 valueKey,
    QVariant value,
    Account_bit userId,
    HistoryIdType history,
    SavedIdType saved,
    bool isId = false,
    QDateTime dTime = QDateTime::currentDateTime() ) [private]
```

Definition at line 358 of file afldHistory.cpp.

#### 6.15.3.9 addOperations() [1/2]

```
void AFlib::id::History::addOperations (
    const OperatePtrList list,
    bool saveToStorage = true,
    bool isId = false )
```

Definition at line 219 of file afldHistory.cpp.

#### 6.15.3.10 addOperations() [2/2]

```
void AFlib::id::History::addOperations (
    const QByteArray & list )
```

Definition at line 210 of file afldHistory.cpp.

#### 6.15.3.11 getAllOperates()

```
AFlib::id::OperatePtrList AFlib::id::History::getAllOperates ( ) const
```

Definition at line 168 of file afldHistory.cpp.

#### 6.15.3.12 getAttribute() [1/4]

```
QVariant AFlib::id::History::getAttribute (
    Attribute key ) const
```

Definition at line 148 of file afldHistory.cpp.

#### 6.15.3.13 getAttribute() [2/4]

```
QVariant AFlib::id::History::getAttribute (
    const OperatePtrList & list,
    quint16 key ) const [private]
```

Definition at line 257 of file afldHistory.cpp.

**6.15.3.14** `getAttribute()` [3/4]

```

- virtual QJsonObject [toJson](#) () const

## Properties

- QString [mail](#)

## Additional Inherited Members

### 6.16.1 Detailed Description

Definition at line 18 of file afAccountInfo.h.

### 6.16.2 Constructor & Destructor Documentation

#### 6.16.2.1 Info() [1/2]

```
AFaccount::Info::Info (  
    QObject * parent = nullptr ) [explicit]
```

Definition at line 6 of file afAccountInfo.cpp.

#### 6.16.2.2 Info() [2/2]

```
AFaccount::Info::Info (  
    AFlib::IdObjectPtr ptr,  
    QObject * parent = nullptr )
```

Definition at line 17 of file afAccountInfo.cpp.

### 6.16.3 Member Function Documentation

### 6.16.3.1 icon()

```
QByteArray AFaccount::Info::icon ( ) const [final], [virtual]
```

Definition at line 40 of file afAccountInfo.cpp.

### 6.16.3.2 iconChanged

```
void AFaccount::Info::iconChanged (
    QString icon ) [signal]
```

### 6.16.3.3 mail()

```
virtual QString AFaccount::Info::mail ( ) const [final], [virtual]
```

### 6.16.3.4 mailChanged

```
void AFaccount::Info::mailChanged (
    QString mail ) [signal]
```

### 6.16.3.5 operator QJsonObject()

```
AFaccount::Info::operator QJsonObject ( ) const
```

Definition at line 63 of file afAccountInfo.cpp.

### 6.16.3.6 setIcon

```
void AFaccount::Info::setIcon (
    const QByteArray & icon ) [final], [virtual], [slot]
```

Definition at line 68 of file afAccountInfo.cpp.

### 6.16.3.7 setMail

```
void AFaccount::Info::setMail (
    const QString & mail ) [final], [virtual], [slot]
```

Definition at line 73 of file afAccountInfo.cpp.

### 6.16.3.8 toJson()

```
QJsonObject AFaccount::Info::toJson ( ) const [virtual]
```

Reimplemented in [AFaccount::Account](#).

Definition at line 50 of file afAccountInfo.cpp.

## 6.16.4 Property Documentation

### 6.16.4.1 mail

```
QString AFaccount::Info::mail [read], [write]
```

Definition at line 22 of file afAccountInfo.h.

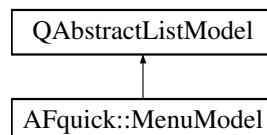

The documentation for this class was generated from the following files:

- lib\_baseAF/include/lib\_baseAF/[afAccountInfo.h](#)
- lib\_baseAF/account/[afAccountInfo.cpp](#)

## 6.17 AFquick::MenuModel Class Reference

```
#include <menuModel.h>
```

Inheritance diagram for AFquick::MenuModel:

### Public Slots

- void [beginResetModelSlot](#) ()
- void [endResetModelSlot](#) ()

## Signals

- QString [getNameByIndex](#) (int index) const

### 6.17.1 Detailed Description

Definition at line 15 of file menuModel.h.

### 6.17.2 Member Enumeration Documentation

#### 6.17.2.1 FieldName

```
enum AFquick::MenuModel::FieldName [private]
```

##### Enumerator

IconPath	
Name	
IsCurrent	
Id	

Definition at line 38 of file menuModel.h.

## 6.17.3 Constructor & Destructor Documentation

### 6.17.3.1 MenuModel()

```
AFquick::MenuModel::MenuModel (
    QObject * parent = nullptr ) [explicit]
```

Definition at line 3 of file menuModel.cpp.

## 6.17.4 Member Function Documentation

### 6.17.4.1 beginResetModelSlot

```
void AFquick::MenuModel::beginResetModelSlot ( ) [slot]
```

Definition at line 41 of file menuModel.cpp.

### 6.17.4.2 data()

```
QVariant AFquick::MenuModel::data (
    const QModelIndex & index,
    int role ) const [override]
```

Definition at line 22 of file menuModel.cpp.

### 6.17.4.3 endResetModelSlot

```
void AFquick::MenuModel::endResetModelSlot ( ) [slot]
```

Definition at line 46 of file menuModel.cpp.

### 6.17.4.4 getCount

```
int AFquick::MenuModel::getCount ( ) const [signal]
```

#### 6.17.4.5 getIconByIndex

```
QString AFquick::MenuModel::getIconByIndex (
    int index ) const [signal]
```

#### 6.17.4.6 getNameByIndex

```
QString AFquick::MenuModel::getNameByIndex (
    int index ) const [signal]
```

#### 6.17.4.7 isCurrentByIndex

```
bool AFquick::MenuModel::isCurrentByIndex (
    int index ) const [signal]
```

#### 6.17.4.8 roleNames()

```
QHash< int, QByteArray > AFquick::MenuModel::roleNames ( ) const [override]
```

Definition at line 17 of file menuModel.cpp.

#### 6.17.4.9 rowCount()

```
int AFquick::MenuModel::rowCount (
    const QModelIndex & parent = QModelIndex() ) const [override]
```

Definition at line 11 of file menuModel.cpp.

#### 6.17.4.10 updateData()

```
void AFquick::MenuModel::updateData ( )
```

Definition at line 36 of file menuModel.cpp.

### 6.17.5 Member Data Documentation

#### 6.17.5.1 m\_currentIndex

```
int AFquick::MenuModel::m_currentIndex [private]
```

Definition at line 45 of file menuModel.h.

#### 6.17.5.2 m\_roleNames

```
QHash<int, QByteArray> AFquick::MenuModel::m_roleNames [private]
```

Definition at line 46 of file menuModel.h.

The documentation for this class was generated from the following files:

- [lib\\_quickAF/include/lib\\_quickAF/menuModel.h](#)
- [lib\\_quickAF/src/menuModel.cpp](#)

### 6.18 AFquick::MenuSingle Struct Reference

```
#include <menuModel.h>
```

#### Public Attributes

- QString [name](#)
- QString [iconPath](#)

#### 6.18.1 Detailed Description

Definition at line 9 of file menuModel.h.

#### 6.18.2 Member Data Documentation

##### 6.18.2.1 iconPath

```
QString AFquick::MenuSingle::iconPath
```

Definition at line 11 of file menuModel.h.

### 6.18.2.2 name

QString AFquick::MenuSingle::name

Definition at line 10 of file menuModel.h.

The documentation for this struct was generated from the following file:

- [lib\\_quickAF/include/lib\\_quickAF/menuModel.h](#)

## 6.19 AFlib::transfer::answer::Object Struct Reference

```
#include <afTransferOperateList.h>
```

### Public Attributes

AFlib::id::Object::Object ( ) [explicit]
```

Definition at line 7 of file `afldObject.cpp`.

#### 6.20.2.2 `Object()` [2/5]

```
AFlib::id::Object::Object (
    const QByteArray & data )
```

Definition at line 17 of file `afldObject.cpp`.

#### 6.20.2.3 `Object()` [3/5]

```
AFlib::id::Object::Object (
    const Object & cpObject )
```

Definition at line 24 of file `afldObject.cpp`.

#### 6.20.2.4 `Object()` [4/5]

```
AFlib::id::Object::Object (
    const Object * cpObject )
```

Definition at line 31 of file `afldObject.cpp`.

### 6.20.2.5 ~Object()

```
virtual AFlib::id::Object::~~Object ( ) [inline], [virtual]
```

Definition at line 22 of file afldObject.h.

### 6.20.2.6 Object() [5/5]

```
AFlib::id::Object::Object (
    id::Account_bit owner,
    quint8 pluginId,
    quint8 typeId,
    QString name = "",
    QString descr = "" ) [private]
```

Definition at line 38 of file afldObject.cpp.

## 6.20.3 Member Function Documentation

### 6.20.3.1 createPtr()

```
AFlib::id::ObjectPtr AFlib::id::Object::createPtr ( ) [static]
```

Definition at line 57 of file afldObject.cpp.

### 6.20.3.2 description()

```
QString AFlib::id::Object::description ( ) const [final], [virtual]
```

Definition at line 78 of file afldObject.cpp.

### 6.20.3.3 getData()

```
QByteArray AFlib::id::Object::getData ( ) const
```

Definition at line 117 of file afldObject.cpp.

#### 6.20.3.4 global()

```
quint64 AFlib::id::Object::global ( ) const [final], [virtual]
```

Definition at line 68 of file afldObject.cpp.

#### 6.20.3.5 globalId()

```
AFlib::id::Global_bit AFlib::id::Object::globalId ( ) const [final], [virtual]
```

Definition at line 63 of file afldObject.cpp.

#### 6.20.3.6 isAccount()

```
bool AFlib::id::Object::isAccount ( ) const [final], [virtual]
```

Definition at line 148 of file afldObject.cpp.

#### 6.20.3.7 listToByteArray()

```
QByteArray AFlib::id::Object::listToByteArray (
    const ObjectPtrV list ) [static]
```

Definition at line 153 of file afldObject.cpp.

#### 6.20.3.8 localId()

```
quint32 AFlib::id::Object::localId ( ) const [final], [virtual]
```

Definition at line 92 of file afldObject.cpp.

#### 6.20.3.9 localId\_b()

```
AFlib::id::Object_bit AFlib::id::Object::localId_b ( ) const [final], [virtual]
```

Definition at line 83 of file afldObject.cpp.

#### 6.20.3.10 makeGlobalId()

```
void AFlib::id::Object::makeGlobalId (
    id::Object_bit newId )
```

Definition at line 51 of file afldObject.cpp.

#### 6.20.3.11 name()

```
QString AFlib::id::Object::name ( ) const [final], [virtual]
```

Definition at line 73 of file afldObject.cpp.

#### 6.20.3.12 operator QByteArray()

```
AFlib::id::Object::operator QByteArray ( ) const
```

Definition at line 131 of file afldObject.cpp.

#### 6.20.3.13 owner()

```
Account_bit AFlib::id::Object::owner ( ) const [inline]
```

Definition at line 43 of file afldObject.h.

#### 6.20.3.14 parent()

```
AFlib::id::Object_bit AFlib::id::Object::parent ( ) const [final], [virtual]
```

Definition at line 107 of file afldObject.cpp.

#### 6.20.3.15 readFromFile() [1/3]

```
AFlib::id::ObjectPtrV AFlib::id::Object::readFromFile (
    const QStringList & dPath,
    FileType type ) [static]
```

Definition at line 236 of file afldObject.cpp.

**6.20.3.16 readFromFile() [2/3]**

```
AFlib::id::ObjectPtr AFlib::id::Object::readFromFile (
    const QStringList & dPath,
    FileType type,
    const AFlib::id::Obj_bit & id ) [static]
```

Definition at line 245 of file afldObject.cpp.

**6.20.3.17 readFromFile() [3/3]**

```
AFlib::id::ObjectPtrV AFlib::id::Object::readFromFile (
    const QStringList & dPath,
    FileType type,
    const ObjectPtrV list ) [static]
```

Definition at line 254 of file afldObject.cpp.

**6.20.3.18 readList() [1/3]**

```
AFlib::id::ObjectPtrV AFlib::id::Object::readList (
    const QByteArray & data ) [static]
```

Definition at line 184 of file afldObject.cpp.

**6.20.3.19 readList() [2/3]**

```
AFlib::id::ObjectPtr AFlib::id::Object::readList (
    const QByteArray & data,
    const Obj_bit id ) [static]
```

Definition at line 192 of file afldObject.cpp.

**6.20.3.20 readList() [3/3]**

```
AFlib::id::ObjectPtrV AFlib::id::Object::readList (
    const QByteArray & data,
    const ObjectPtrV list ) [static]
```

Definition at line 206 of file afldObject.cpp.

**6.20.3.21 savedStatus()**

```
AFlib::SavedIdType AFlib::id::Object::savedStatus ( ) [override], [virtual]
```

Implements [AFlib::id::History](#).

Definition at line 122 of file afldObject.cpp.

**6.20.3.22 saveToStorage()**

```
void AFlib::id::Object::saveToStorage (
    const OperatePtr ptr,
    bool isId = false ) [final], [override], [private], [virtual]
```

Implements [AFlib::id::History](#).

Definition at line 263 of file afldObject.cpp.

**6.20.3.23 setDescription()**

```
void AFlib::id::Object::setDescription (
    const QString & description ) [final], [virtual]
```

Definition at line 102 of file afldObject.cpp.

**6.20.3.24 setName()**

```
void AFlib::id::Object::setName (
    const QString & name ) [final], [virtual]
```

Definition at line 97 of file afldObject.cpp.

**6.20.3.25 setOwner()**

```
bool AFlib::id::Object::setOwner (
    const Account_bit & owner ) [final], [virtual]
```

**Function** set owner, only work if history is empty (empty exists create and date time operate).

**Parameters**

<i>owner</i>	Owner id.
--------------	-----------

### Returns

Return result of set new id, return false if history is not empty.

Definition at line 139 of file afldObject.cpp.

#### 6.20.3.26 setParent()

```
void AFlib::id::Object::setParent (
    Object_bit obj_b ) [final], [virtual]
```

Definition at line 112 of file afldObject.cpp.

#### 6.20.3.27 setUniqueld()

```
bool AFlib::id::Object::setUniqueId ( ) [private]
```

Definition at line 268 of file afldObject.cpp.

### 6.20.4 Friends And Related Function Documentation

#### 6.20.4.1 AFlib::id::ObjectTemplate

```
friend class AFlib::id::ObjectTemplate [friend]
```

Definition at line 77 of file afldObject.h.

#### 6.20.4.2 operator<<

```
QDataStream& operator<< (
    QDataStream & stream,
    const Object & data ) [friend]
```

Definition at line 163 of file afldObject.cpp.

### 6.20.4.3 operator>>

```
QDataStream& operator>> (
    QDataStream & stream,
    Object & data ) [friend]
```

Definition at line 176 of file afIdObject.cpp.

The documentation for this class was generated from the following files:

- lib\_baseAF/include/lib\_baseAF/afIdObject.h
- lib\_baseAF/base/afIdObject.cpp

#### 6.23.3.4 owner()

```
AFLib::id::Account_bit AFLib::id::ObjectTemplate::owner ( ) const
```

Definition at line 62 of file afldObjectTemplate.cpp.

### 6.23.3.5 save()

```
bool AFlib::id::ObjectTemplate::save ( ) [final], [virtual]
```

Definition at line 72 of file afldObjectTemplate.cpp.

## 6.23.4 Member Data Documentation

### 6.23.4.1 m\_fileType

```
FileType AFlib::id::ObjectTemplate::m_fileType [protected]
```

Definition at line 26 of file afldObjectTemplate.h.

### 6.23.4.2 m\_ptr

```
ObjectPtr AFlib::id::ObjectTemplate::m_ptr [protected]
```

Definition at line 27 of file afldObjectTemplate.h.

### 6.23.4.3 m\_subDPath

```
QStringList AFlib::id::ObjectTemplate::m_subDPath [protected]
```

Definition at line 25 of file afldObjectTemplate.h.

The documentation for this class was generated from the following files:

- [lib\\_baseAF/include/lib\\_baseAF/afldObjectTemplate.h](#)
- [lib\\_baseAF/base/afldObjectTemplate.cpp](#)

## 6.24 AFlib::id::Operate Class Reference

```
#include <afIdOperate.h>
```

Inheritance diagram for AFlib::id::Operate:

## Public Member Functions

- [Operate](#) ([Account\\_bit](#) [userId](#)=[Account\\_bit](#)(), [HistoryIdType](#) [history](#)=[HistoryIdType::First](#), [SavedIdType](#) [saved](#)=[SavedIdType::Local](#), [QVariant](#) [value](#)=[QVariant](#)(), [quint16](#) [valueKey](#)=0, [QDateTime](#) [dTime](#)=[QDateTime::currentDateTime](#)())
- [Operate](#) (const [Operate](#) &copy)
- [Operate](#) (const [QByteArray](#) &data)
- virtual [~Operate](#) ()
- [operator QByteArray](#) () const
- [QByteArray](#) [getData](#) () const
- [QDateTime](#) [datetime](#) () const
- void [setDatetime](#) (const [QDateTime](#) &[datetime](#))
- [QVariant](#) [value](#) () const
- void [setValue](#) (const [QVariant](#) &[value](#))

## Private Member Functions

- [Global\\_bit](#) [valueld](#) () const
- void [setValueld](#) ([Global\\_bit](#) [newld](#))

## Private Attributes

- [QDateTime](#) [m\\_datetime](#)
- [QVariant](#) [m\\_value](#)

## Friends

- class [History](#)
- class [Object](#)
- class [AFlib::Storage](#)

## Additional Inherited Members

### 6.24.1 Detailed Description

Definition at line 67 of file [afldOperate.h](#).

### 6.24.2 Constructor & Destructor Documentation

### 6.24.2.1 Operate() [1/3]

```
AFlib::id::Operate::Operate (
    Account_bit   userId = Account_bit(),
    HistoryIdType history = HistoryIdType::First,
    SavedIdType   saved = SavedIdType::Local,
    QVariant      value = QVariant(),
    quint16       valueKey = 0,
    QDateTime     dTime = QDateTime::currentDateTime() ) [explicit]
```

Definition at line 21 of file afldOperate.cpp.

### 6.24.2.2 Operate() [2/3]

```
AFlib::id::Operate::Operate (
    const Operate & copy )
```

Definition at line 33 of file afldOperate.cpp.

### 6.24.2.3 Operate() [3/3]

```
AFlib::id::Operate::Operate (
    const QByteArray & data )
```

Definition at line 41 of file afldOperate.cpp.

### 6.24.2.4 ~Operate()

```
AFlib::id::Operate::~~Operate ( ) [virtual]
```

Definition at line 48 of file afldOperate.cpp.

## 6.24.3 Member Function Documentation

### 6.24.3.1 datetime()

```
QDateTime AFlib::id::Operate::datetime ( ) const [inline]
```

Definition at line 84 of file afldOperate.h.

#### 6.24.3.2 getData()

```
QByteArray AFlib::id::Operate::getData ( ) const
```

Definition at line 53 of file afldOperate.cpp.

#### 6.24.3.3 operator QByteArray()

```
AFlib::id::Operate::operator QByteArray ( ) const
```

Definition at line 58 of file afldOperate.cpp.

#### 6.24.3.4 setDatetime()

```
void AFlib::id::Operate::setDatetime (
    const QDateTime & datetime )
```

Definition at line 69 of file afldOperate.cpp.

#### 6.24.3.5 setValue()

```
void AFlib::id::Operate::setValue (
    const QVariant & value )
```

Definition at line 6 of file afldOperate.cpp.

#### 6.24.3.6 setValueId()

```
void AFlib::id::Operate::setValueId (
    Global_bit newId ) [private]
```

Definition at line 16 of file afldOperate.cpp.

#### 6.24.3.7 value()

```
QVariant AFlib::id::Operate::value ( ) const [inline]
```

Definition at line 87 of file afldOperate.h.

#### 6.24.3.8 valueId()

```
AFlib::id::Global_bit AFlib::id::Operate::valueId ( ) const [private]
```

Definition at line 11 of file afldOperate.cpp.

### 6.24.4 Friends And Related Function Documentation

#### 6.24.4.1 AFlib::Storage

```
friend class AFlib::Storage [friend]
```

Definition at line 97 of file afldOperate.h.

#### 6.24.4.2 History

```
friend class History [friend]
```

Definition at line 95 of file afldOperate.h.

#### 6.24.4.3 Object

```
friend class Object [friend]
```

Definition at line 96 of file afldOperate.h.

### 6.24.5 Member Data Documentation

#### 6.24.5.1 m\_datetime

```
QDateTime AFlib::id::Operate::m_datetime [private]
```

Definition at line 91 of file afldOperate.h.

### 6.24.5.2 m\_value

```
QVariant AFlib::id::Operate::m_value [private]
```

Definition at line 92 of file `afldOperate.h`.

The documentation for this class was generated from the following files:

- `lib_baseAF/include/lib_baseAF/afldOperate.h`
- `lib_baseAF/base/afldOperate.cpp`

## 6.25 AFlib::id::Operate\_bit Struct Reference

```
#include <afIdOperate.h>
```

Inheritance diagram for `AFlib::id::Operate_bit`:

### Public Member Functions

- `Account_bit user () const`
- `quint32 userId () const`
- `HIdType historyType () const`
- `SIdType saveType () const`
- `quint16 key () const`
- `quint8 reserved () const`
- `void setReserved (quint8 r)`

### Protected Member Functions

- `virtual void setUserId (quint32 id) final`
- `virtual void setUserId (Acc_bit id) final`
- `virtual void setHistoryType (quint8 type) final`
- `virtual void setHistoryType (HIdType type) final`
- `virtual bool setSaveType (quint8 type) final`
- `virtual bool setSaveType (SIdType type) final`
- `virtual void setKey (quint16 key) final`

### Friends

- `QDataStream & operator<< (QDataStream &s, const Operate_bit &op)`
- `QDataStream & operator>> (QDataStream &s, Operate_bit &op)`

## Additional Inherited Members

### 6.25.1 Detailed Description

Definition at line 32 of file afldOperate.h.

### 6.25.2 Member Function Documentation

#### 6.25.2.1 historyType()

```
HIdType AFlib::id::Operate_bit::historyType ( ) const [inline]
```

Definition at line 36 of file afldOperate.h.

#### 6.25.2.2 key()

```
quint16 AFlib::id::Operate_bit::key ( ) const [inline]
```

Definition at line 38 of file afldOperate.h.

#### 6.25.2.3 reserved()

```
quint8 AFlib::id::Operate_bit::reserved ( ) const [inline]
```

Definition at line 40 of file afldOperate.h.

#### 6.25.2.4 saveType()

```
SIdType AFlib::id::Operate_bit::saveType ( ) const [inline]
```

Definition at line 37 of file afldOperate.h.

#### 6.25.2.5 setHistoryType() [1/2]

```
virtual void AFlib::id::Operate_bit::setHistoryType (
    HIdType type ) [inline], [final], [protected], [virtual]
```

Definition at line 48 of file afldOperate.h.

#### 6.25.2.6 setHistoryType() [2/2]

```
virtual void AFlib::id::Operate_bit::setHistoryType (
    quint8 type ) [inline], [final], [protected], [virtual]
```

Definition at line 47 of file afldOperate.h.

#### 6.25.2.7 setKey()

```
virtual void AFlib::id::Operate_bit::setKey (
    quint16 key ) [inline], [final], [protected], [virtual]
```

Definition at line 53 of file afldOperate.h.

#### 6.25.2.8 setReserved()

```
void AFlib::id::Operate_bit::setReserved (
    quint8 r ) [inline]
```

Definition at line 41 of file afldOperate.h.

#### 6.25.2.9 setSaveType() [1/2]

```
bool AFlib::id::Operate_bit::setSaveType (
    quint8 type ) [final], [protected], [virtual]
```

Definition at line 94 of file afldOperate.cpp.

#### 6.25.2.10 setSaveType() [2/2]

```
bool AFlib::id::Operate_bit::setSaveType (
    SIdType type ) [final], [protected], [virtual]
```

Definition at line 99 of file afldOperate.cpp.

#### 6.25.2.11 setUserId() [1/2]

```
virtual void AFlib::id::Operate_bit::setUserId (
    Acc_bit id ) [inline], [final], [protected], [virtual]
```

Definition at line 45 of file afldOperate.h.

### 6.25.2.12 setUserId() [2/2]

```
virtual void AFlib::id::Operate_bit::setUserId (
    quint32 id ) [inline], [final], [protected], [virtual]
```

Definition at line 44 of file afldOperate.h.

### 6.25.2.13 user()

```
Account_bit AFlib::id::Operate_bit::user ( ) const [inline]
```

Definition at line 34 of file afldOperate.h.

### 6.25.2.14 userId()

```
quint32 AFlib::id::Operate_bit::userId ( ) const [inline]
```

Definition at line 35 of file afldOperate.h.

## 6.25.3 Friends And Related Function Documentation

### 6.25.3.1 operator<<

```
QDataStream& operator<< (
    QDataStream & s,
    const Operate_bit & op ) [friend]
```

Definition at line 56 of file afldOperate.h.

### 6.25.3.2 operator>>

```
QDataStream& operator>> (
    QDataStream & s,
    Operate_bit & op ) [friend]
```

Definition at line 59 of file afldOperate.h.

The documentation for this struct was generated from the following files:

- [lib\\_baseAF/include/lib\\_baseAF/afldOperate.h](#)
- [lib\\_baseAF/base/afldOperate.cpp](#)

## 6.26 AFlib::transfer::send::Operates Struct Reference

```
#include <afTransferOperateList.h>
```

### Public Member Functions

- [Operates](#) ()
- [Operates](#) (id::Global\_bit globalId)

### Public Attributes

- [id::Global\\_bit](#) globalId
- [id::OperatePtrList](#) operateList
- [id::OperatePtrList](#) operateIdList

### Friends

- QDataStream & [operator<<](#) (QDataStream &stream, const [Operates](#) &data)
- QDataStream & [operator>>](#) (QDataStream &stream, [Operates](#) &data)

### 6.26.1 Detailed Description

Definition at line 59 of file afTransferOperateList.h.

### 6.26.2 Constructor & Destructor Documentation

#### 6.26.2.1 Operates() [1/2]

```
AFlib::transfer::send::Operates::Operates ( ) [inline]
```

Definition at line 60 of file afTransferOperateList.h.

#### 6.26.2.2 Operates() [2/2]

```
AFlib::transfer::send::Operates::Operates (
    id::Global_bit globalId ) [inline]
```

Definition at line 61 of file afTransferOperateList.h.

## 6.26.3 Friends And Related Function Documentation

### 6.26.3.1 operator<<

```
QDataStream& operator<< (  
    QDataStream & stream,  
    const Operates & data ) [friend]
```

Definition at line 181 of file afTransferOperateList.cpp.

### 6.26.3.2 operator>>

```
QDataStream& operator>> (  
    QDataStream & stream,  
    Operates & data ) [friend]
```

Definition at line 186 of file afTransferOperateList.cpp.

## 6.26.4 Member Data Documentation

### 6.26.4.1 globalId

```
id::Global_bit AFlib::transfer::send::Operates::globalId
```

Definition at line 62 of file afTransferOperateList.h.

### 6.26.4.2 operateIdList

```
id::OperatePtrList AFlib::transfer::send::Operates::operateIdList
```

Definition at line 65 of file afTransferOperateList.h.

### 6.26.4.3 operateList

```
id::OperatePtrList AFlib::transfer::send::Operates::operateList
```

Definition at line 64 of file afTransferOperateList.h.

The documentation for this struct was generated from the following file:

- lib\_baseAF/include/lib\_baseAF/[afTransferOperateList.h](#)

## 6.27 AFlib::Storage::PluginStorage Struct Reference

### Public Member Functions

- void [addSingle](#) (QStringList dPath, [FileType](#) fileType, QDateTime time, [IdObject\\_bit](#) id)

### Public Attributes

- quint8 [pluginId](#)
- std::vector< [SingleStorage](#) > [idList](#)

### 6.27.1 Detailed Description

Definition at line 73 of file afStorage.h.

### 6.27.2 Member Function Documentation

#### 6.27.2.1 addSingle()

```
void Storage::PluginStorage::addSingle (
    QStringList dPath,
    FileType fileType,
    QDateTime time,
    IdObject\_bit id )
```

Definition at line 540 of file afStorage.cpp.

### 6.27.3 Member Data Documentation

#### 6.27.3.1 idList

```
std::vector<SingleStorage> AFlib::Storage::PluginStorage::idList
```

Definition at line 76 of file afStorage.h.

### 6.27.3.2 pluginId

```
quint8 AFlib::Storage::PluginStorage::pluginId
```

Definition at line 74 of file afStorage.h.

The documentation for this struct was generated from the following files:

- [lib\\_baseAF/include/lib\\_baseAF/afStorage.h](#)
- [lib\\_baseAF/tool/afStorage.cpp](#)

## 6.28 AFlib::transfer::Send Class Reference

```
#include <afTransferOperateList.h>
```

Inheritance diagram for AFlib::transfer::Send:

### Public Member Functions

- [Send](#) ()=default
- [Send](#) (const QByteArray &data)
- void [addNewObject](#) (const QStringList &dPath, [FileType](#) fileType, [id::ObjectPtr](#) object)
- void [addOperate](#) (const QStringList &dPath, [FileType](#) fileType, [id::Global\\_bit](#) id, [id::OperatePtrList](#) list, bool isId)
- void [addOperate](#) (const QStringList &dPath, [FileType](#) fileType, [id::Global\\_bit](#) id, [id::OperatePtr](#) operate, bool isId)
- [operator QByteArray](#) () const
- QByteArray [getData](#) () const

### 6.28.1 Detailed Description

Definition at line 83 of file afTransferOperateList.h.

### 6.28.2 Constructor & Destructor Documentation

#### 6.28.2.1 Send() [1/2]

```
AFlib::transfer::Send::Send ( ) [explicit], [default]
```

### 6.28.2.2 Send() [2/2]

```
AFLib::transfer::Send::Send (
    const QByteArray & data )
```

Definition at line 107 of file afTransferOperateList.cpp.

## 6.28.3 Member Function Documentation

### 6.28.3.1 addNewObject()

```
void AFLib::transfer::Send::addNewObject (
    const QStringList & dPath,
    FileType fileType,
    id::ObjectPtr object )
```

Definition at line 113 of file afTransferOperateList.cpp.

### 6.28.3.2 addOperate() [1/2]

```
void AFLib::transfer::Send::addOperate (
    const QStringList & dPath,
    FileType fileType,
    id::Global_bit id,
    id::OperatePtr operate,
    bool isId )
```

Definition at line 140 of file afTransferOperateList.cpp.

### 6.28.3.3 addOperate() [2/2]

```
void AFLib::transfer::Send::addOperate (
    const QStringList & dPath,
    FileType fileType,
    id::Global_bit id,
    id::OperatePtrList list,
    bool isId )
```

Definition at line 124 of file afTransferOperateList.cpp.

### 6.28.3.4 `getData()`

```
QByteArray AFlib::transfer::Send::getData ( ) const
```

Definition at line 148 of file `afTransferOperateList.cpp`.

### 6.28.3.5 `operator QByteArray()`

```
AFlib::transfer::Send::operator QByteArray ( ) const
```

Definition at line 153 of file `afTransferOperateList.cpp`.

The documentation for this class was generated from the following files:

- [lib\\_baseAF/include/lib\\_baseAF/afTransferOperateList.h](#)
- [lib\\_baseAF/tool/afTransferOperateList.cpp](#)

## 6.29 Server Class Reference

```
#include <server.h>
```

Inheritance diagram for Server:

### Public Member Functions

- [Server](#) (QObject \*parent=nullptr)
- virtual [~Server](#) ()=default
- void [init](#) ()
- int [listen](#) (const QHostAddress &address=QHostAddress::Any, quint16 port=0)

### Static Private Member Functions

- static QByteArray [ping](#) ()
- static QByteArray [login](#) (const QHttpRequest &request)

- static QByteArray [remindMyLogin](#) (const QHttpRequest &request)
- static QByteArray [remindMyPassword](#) (const QHttpRequest &request)
- static QByteArray [updateObjects](#) (const QHttpRequest &request)

## Private Attributes

- `QHttpServer * m_server`

### 6.29.1 Detailed Description

Definition at line 7 of file `server.h`.

### 6.29.2 Constructor & Destructor Documentation

#### 6.29.2.1 `Server()`

```
Server::Server (
    QObject * parent = nullptr ) [explicit]
```

Definition at line 6 of file `server.cpp`.

#### 6.29.2.2 `~Server()`

```
virtual Server::~Server ( ) [virtual], [default]
```

### 6.29.3 Member Function Documentation

#### 6.29.3.1 `addAccount()`

```
QByteArray Server::addAccount (
    const QHttpServerRequest & request ) [static], [private]
```

Definition at line 109 of file `server.cpp`.

#### 6.29.3.2 `addAccountById()`

```
QByteArray Server::addAccountById (
    const QHttpServerRequest & request ) [static], [private]
```

Definition at line 116 of file `server.cpp`.

### 6.29.3.3 init()

```
void Server::init ( )
```

Definition at line 15 of file server.cpp.

### 6.29.3.4 listen()

```
int Server::listen (
    const QHostAddress & address = QHostAddress::Any,
    quint16 port = 0 )
```

Definition at line 28 of file server.cpp.

### 6.29.3.5 login()

```
QByteArray Server::login (
    const QHttpRequest & request ) [static], [private]
```

Definition at line 41 of file server.cpp.

### 6.29.3.6 ping()

```
QByteArray Server::ping ( ) [static], [private]
```

Definition at line 33 of file server.cpp.

### 6.29.3.7 registrate()

```
QByteArray Server::registrate (
    const QHttpRequest & request ) [static], [private]
```

Definition at line 67 of file server.cpp.

### 6.29.3.8 remindMyLogin()

```
QByteArray Server::remindMyLogin (
    const QHttpRequest & request ) [static], [private]
```

Definition at line 123 of file server.cpp.

### 6.29.3.9 remindMyPassword()

```
QByteArray Server::remindMyPassword (
    const QHttpRequest & request ) [static], [private]
```

Definition at line 130 of file server.cpp.

### 6.29.3.10 updateObjects()

```
QByteArray Server::updateObjects (
    const QHttpRequest & request ) [static], [private]
```

Definition at line 137 of file server.cpp.

## 6.29.4 Member Data Documentation

### 6.29.4.1 m\_server

```
QHttpServer* Server::m_server [private]
```

Definition at line 27 of file server.h.

The documentation for this class was generated from the following files:

- serverAF/[server.h](#)
- serverAF/[server.cpp](#)

## 6.30 AFlib::ServerSetting Class Reference

```
#include <afServerSettings.h>
```

Inheritance diagram for AFlib::ServerSetting:

### Public Member Functions

- [ServerSetting](#) (`QObject *parent=nullptr`)
- bool [addUrl](#) (`QString key, QString url`)
- `QString` [getUrl](#) (`QString key, QString defaultValue=""`) const
- `QDateTime` [lastStorageUpdate](#) () const

## Private Attributes

- QMap< QString, QString > [m\\_linkMap](#)
- QDateTime [m\\_lastStorageUpdate](#)
- QSettings [m\\_settings](#)

### 6.30.1 Detailed Description

Definition at line 18 of file afServerSettings.h.

### 6.30.2 Constructor & Destructor Documentation

#### 6.30.2.1 ServerSetting()

```
AFlib::ServerSetting::ServerSetting (  
    QObject * parent = nullptr ) [explicit]
```

Definition at line 5 of file afServerSettings.cpp.

### 6.30.3 Member Function Documentation

#### 6.30.3.1 addUrl()

```
bool AFlib::ServerSetting::addUrl (  
    QString key,  
    QString url )
```

Definition at line 10 of file afServerSettings.cpp.

#### 6.30.3.2 getUrl()

```
QString AFlib::ServerSetting::getUrl (  
    QString key,  
    QString defaultValue = "" ) const
```

Definition at line 20 of file afServerSettings.cpp.

### 6.30.3.3 lastStorageUpdate()

```
QDateTime AFlib::ServerSetting::lastStorageUpdate ( ) const
```

Definition at line 25 of file afServerSettings.cpp.

## 6.30.4 Member Data Documentation

### 6.30.4.1 m\_lastStorageUpdate

```
QDateTime AFlib::ServerSetting::m_lastStorageUpdate [private]
```

Definition at line 31 of file afServerSettings.h.

### 6.30.4.2 m\_linkMap

```
QMap<QString, QString> AFlib::ServerSetting::m_linkMap [private]
```

Definition at line 30 of file afServerSettings.h.

### 6.30.4.3 m\_settings

```
QSettings AFlib::ServerSetting::m_settings [private]
```

Definition at line 32 of file afServerSettings.h.

The documentation for this class was generated from the following files:

- [lib\\_baseAF/include/lib\\_baseAF/afServerSettings.h](#)
- [lib\\_baseAF/tool/afServerSettings.cpp](#)

## 6.31 AFlib::Setting Class Reference

```
#include <afSetting.h>
```

Inheritance diagram for AFlib::Setting:

## Public Member Functions

- [Setting](#) (QObject \*parent=nullptr)

## Static Public Member Functions

- static std::optional< QVariant > [value](#) (const QString &key)

### 6.31.1 Detailed Description

Definition at line 11 of file afSetting.h.

### 6.31.2 Constructor & Destructor Documentation

#### 6.31.2.1 Setting()

```
AFlib::Setting::Setting (  
    QObject * parent = nullptr ) [explicit]
```

Definition at line 4 of file afSetting.cpp.

### 6.31.3 Member Function Documentation

#### 6.31.3.1 value()

```
std::optional< QVariant > AFlib::Setting::value (  
    const QString & key ) [static]
```

Definition at line 9 of file afSetting.cpp.

The documentation for this class was generated from the following files:

- lib\_baseAF/include/lib\_baseAF/[afSetting.h](#)
- lib\_baseAF/tool/[afSetting.cpp](#)

## 6.32 AFlib::Storage::SingleStorage Struct Reference

### Public Attributes

- QDateTime [lastChange](#)
- [IdObject\\_bit](#) id
- QStringList [dPath](#)
- [FileType](#) fileType
- QList< [id::Global\\_bit](#) > [localSharedList](#)

### 6.32.1 Detailed Description

Definition at line 64 of file afStorage.h.

### 6.32.2 Member Data Documentation

#### 6.32.2.1 dPath

```
QStringList AFlib::Storage::SingleStorage::dPath
```

Definition at line 67 of file afStorage.h.

#### 6.32.2.2 fileType

```
FileType AFlib::Storage::SingleStorage::fileType
```

Definition at line 68 of file afStorage.h.

#### 6.32.2.3 id

```
IdObject_bit AFlib::Storage::SingleStorage::id
```

Definition at line 66 of file afStorage.h.

#### 6.32.2.4 lastChange

```
QDateTime AFlib::Storage::SingleStorage::lastChange
```

Definition at line 65 of file afStorage.h.

#### 6.32.2.5 localSharedList

```
QList<id::Global_bit> AFlib::Storage::SingleStorage::localSharedList
```

Definition at line 70 of file afStorage.h.

The documentation for this struct was generated from the following file:

- [lib\\_baseAF/include/lib\\_baseAF/afStorage.h](#)

## 6.33 AFaccount::Storage Class Reference

The [AFaccount::Storage](#) class we load all possible account, and take it on RAM, so we can access to them always in any time, but we need to make shorten every object that we have and it give us speed when we parse this list.

```
#include <afAccountStorage.h>
```

Inheritance diagram for AFaccount::Storage:

### Public Slots

- class [AFlib::API](#)

### 6.33.1 Detailed Description

The [AFaccount::Storage](#) class we load all possible account, and take it on RAM, so we can access to them always in any time, but we need to make shorten every object that we have and it give us speed when we parse this list.

#### Note

This class work only with local data, for use data from server need to use AccountAPI class.

Definition at line 24 of file afAccountStorage.h.

### 6.33.2 Constructor & Destructor Documentation

### 6.33.2.1 Storage()

```
AFaccount::Storage::Storage (
    QObject * parent = nullptr ) [explicit]
```

Definition at line 17 of file afAccountStorage.cpp.

## 6.33.3 Member Function Documentation

### 6.33.3.1 add() [1/2]

```
void AFaccount::Storage::add (
    AccountPtr account,
    bool isNeedSave = true )
```

Definition at line 118 of file afAccountStorage.cpp.

### 6.33.3.2 add() [2/2]

```
void AFaccount::Storage::add (
    GroupPtr group,
    bool isNeedSave = true )
```

Definition at line 128 of file afAccountStorage.cpp.

### 6.33.3.3 check() [1/2]

```
bool AFaccount::Storage::check (
    const AFlib::id::Account_bit & id )
```

Definition at line 31 of file afAccountStorage.cpp.

### 6.33.3.4 check() [2/2]

```
bool AFaccount::Storage::check (
    const quint32 & id )
```

Definition at line 44 of file afAccountStorage.cpp.

### 6.33.3.5 checkLogin() [1/2]

```
std::optional< QString > AFaccount::Storage::checkLogin (
    QString login,
    QString password ) const
```

checkLogin \badcode return need rewrite

**Parameters**

<i>login</i>	
<i>password</i>	

**Returns**

Return true if have error, it's hasn't logic, but for now it's ok.

Definition at line 49 of file afAccountStorage.cpp.

**6.33.3.6 checkLogin() [2/2]**

```
std::optional< QString > AFaccount::Storage::checkLogin (
    QString login,
    QString password,
    AFlib::id::Account_bit acc_b ) const
```

Definition at line 54 of file afAccountStorage.cpp.

**6.33.3.7 checkNickname()**

```
bool AFaccount::Storage::checkNickname (
    const QString & nick )
```

Definition at line 110 of file afAccountStorage.cpp.

**6.33.3.8 contains()**

```
bool AFaccount::Storage::contains (
    AFlib::id::Account_bit id ) const [private]
```

Definition at line 251 of file afAccountStorage.cpp.

**6.33.3.9 dependsAccount()**

```
QList< AFlib::id::Account_bit > AFaccount::Storage::dependsAccount (
    AFlib::id::Account_bit account = AFlib::id::Acc_bit(0) ) const
```

Definition at line 69 of file afAccountStorage.cpp.

#### 6.33.3.10 getAccount()

```
std::optional< AFaccount::AccountPtr > AFaccount::Storage::getAccount (
    const AFlib::id::Account_bit acc ) [private]
```

Definition at line 235 of file afAccountStorage.cpp.

#### 6.33.3.11 getGroup()

```
std::optional< AFaccount::GroupPtr > AFaccount::Storage::getGroup (
    const AFlib::id::Account_bit acc ) [private]
```

Definition at line 243 of file afAccountStorage.cpp.

#### 6.33.3.12 getInfo() [1/3]

```
AFaccount::InfoPtr AFaccount::Storage::getInfo (
    const AFidAccount & id )
```

Definition at line 87 of file afAccountStorage.cpp.

#### 6.33.3.13 getInfo() [2/3]

```
AFaccount::InfoPtr AFaccount::Storage::getInfo (
    const QString & nick )
```

Definition at line 97 of file afAccountStorage.cpp.

#### 6.33.3.14 getInfo() [3/3]

```
AFaccount::InfoPtr AFaccount::Storage::getInfo (
    const quint32 & id )
```

Definition at line 105 of file afAccountStorage.cpp.

#### 6.33.3.15 instance()

```
AFaccount::StoragePtr AFaccount::Storage::instance ( ) [static]
```

Definition at line 26 of file afAccountStorage.cpp.

#### 6.33.3.16 isGuest()

```
bool AFaccount::Storage::isGuest ( ) const
```

#### 6.33.3.17 isGuestChanged

```
void AFaccount::Storage::isGuestChanged ( ) [signal]
```

#### 6.33.3.18 login

```
void AFaccount::Storage::login (
    const QString & login,
    const QString & password ) [slot]
```

Definition at line 161 of file afAccountStorage.cpp.

#### 6.33.3.19 loginAs()

```
void AFaccount::Storage::loginAs (
    AFlib::id::Account_bit account ) [private]
```

Definition at line 216 of file afAccountStorage.cpp.

#### 6.33.3.20 logout

```
void AFaccount::Storage::logout ( ) [slot]
```

Definition at line 171 of file afAccountStorage.cpp.

#### 6.33.3.21 reload()

```
void AFaccount::Storage::reload ( ) [private]
```

Definition at line 178 of file afAccountStorage.cpp.

#### 6.33.3.22 remove()

```
bool AFaccount::Storage::remove (
    AFlib::id::Account_bit id )
```

Definition at line 138 of file afAccountStorage.cpp.

#### 6.33.3.23 save() [1/2]

```
bool AFaccount::Storage::save (
    AccountPtr account ) [private]
```

Definition at line 223 of file afAccountStorage.cpp.

#### 6.33.3.24 save() [2/2]

```
bool AFaccount::Storage::save (
    GroupPtr group ) [private]
```

Definition at line 229 of file afAccountStorage.cpp.

#### 6.33.3.25 user()

```
Account* AFaccount::Storage::user ( ) const
```

#### 6.33.3.26 userChanged

```
void AFaccount::Storage::userChanged ( ) [signal]
```

### 6.33.4 Friends And Related Function Documentation

#### 6.33.4.1 AFlib::API

```
friend class AFlib::API [friend]
```

Definition at line 84 of file afAccountStorage.h.

### 6.33.5 Member Data Documentation

#### 6.33.5.1 m\_accountList

[AccountPtrV](#) AFaccount::Storage::m\_accountList [private]

Definition at line 71 of file afAccountStorage.h.

#### 6.33.5.2 m\_accountStorageDir

[QDir](#) AFaccount::Storage::m\_accountStorageDir = [QDir::current\(\)](#) [static], [private]

Definition at line 70 of file afAccountStorage.h.

#### 6.33.5.3 m\_groupList

[GroupPtrV](#) AFaccount::Storage::m\_groupList [private]

Definition at line 72 of file afAccountStorage.h.

### 6.33.6 Property Documentation

#### 6.33.6.1 isGuest

[bool](#) AFaccount::Storage::isGuest [read]

Definition at line 27 of file afAccountStorage.h.

#### 6.33.6.2 user

[AFaccount::Account](#) \* AFaccount::Storage::user [read]

Definition at line 28 of file afAccountStorage.h.

The documentation for this class was generated from the following files:

- [lib\\_baseAF/include/lib\\_baseAF/afAccountStorage.h](#)

    const QStringList dPath,
    const IdObjectPtrV list,
    AFlib::FileType type,
    Compress compress = Compress::AllActive )
```

Definition at line 248 of file afStorage.cpp.

**6.34.4.21 getObjectList() [4/5]**

```
IdObjectPtrV Storage::getObjectList (
    const QStringList dPath,
    const IdObjectPtrV list,
    Compress compress = Compress::AllActive,
    AFlib::FileType type = AFlib::FileType::Data )
```

Definition at line 253 of file afStorage.cpp.

**6.34.4.22 getObjectList() [5/5]**

```
IdObjectPtrV Storage::getObjectList (
    QList< id::Account_bit > accList,
    quint8 plugin,
    Compress compress = Compress::AllActive )
```

Definition at line 220 of file afStorage.cpp.

**6.34.4.23 getOperatesAfter()**

```
transfer::Send Storage::getOperatesAfter (
    const QDateTime & dateTime,
    AFaccList_b list = AFaccList_b() )
```

Definition at line 127 of file afStorage.cpp.

#### 6.34.4.24 init()

```
QSharedPointer< AFlib::Storage > Storage::init ( ) [static]
```

Definition at line 15 of file afStorage.cpp.

#### 6.34.4.25 loadFromDirectory()

```
void Storage::loadFromDirectory (
    const QStringList & dPath,
    Compress compress = Compress::AllActive )
```

Definition at line 28 of file afStorage.cpp.

#### 6.34.4.26 registrateObject() [1/3]

```
void Storage::registrateObject (
    const QStringList dPath,
    FileType fileType,
    const IdObject & object ) [private]
```

Definition at line 465 of file afStorage.cpp.

#### 6.34.4.27 registrateObject() [2/3]

```
void Storage::registrateObject (
    const QStringList dPath,
    FileType fileType,
    const IdObjectPtr object ) [private]
```

Definition at line 481 of file afStorage.cpp.

#### 6.34.4.28 registrateObject() [3/3]

```
void Storage::registrateObject (
    const QStringList dPath,
    FileType fileType,
    const IdObjectPtrV list ) [private]
```

Definition at line 486 of file afStorage.cpp.

#### 6.34.4.29 removeListByFile()

```
void Storage::removeListByFile (
    const QStringList dPath,
    FileType fileType ) [private]
```

Definition at line 455 of file afStorage.cpp.

#### 6.34.4.30 removeObject()

```
bool Storage::removeObject (
    const IdObject & object )
```

Definition at line 263 of file afStorage.cpp.

#### 6.34.4.31 saveObjects()

```
transfer::Answer Storage::saveObjects (
    transfer::Send & sendData )
```

Definition at line 317 of file afStorage.cpp.

#### 6.34.4.32 setLastChangedTime()

```
void Storage::setLastChangedTime (
    quint32 account,
    IdObject_bit id,
    QDateTime dTime ) [private]
```

Definition at line 505 of file afStorage.cpp.

#### 6.34.4.33 updateFile()

```
bool Storage::updateFile (
    const QStringList dPath,
    const QByteArray & data,
    AFlib::FileType type = AFlib::FileType::Data )
```

Definition at line 46 of file afStorage.cpp.

#### 6.34.4.34 updateObjects()

```
bool Storage::updateObjects (
    transfer::Answer answer,
    transfer::Send & operateList )
```

Definition at line 289 of file afStorage.cpp.

### 6.36.1 Detailed Description

```
template<uint bitsize>
struct AFlib::id::TbitStruct< bitsize >
```

Definition at line 14 of file afldBit.h.

### 6.36.2 Member Function Documentation

#### 6.36.2.1 bitSize()

```
template<uint bitsize>
uint AFlib::id::TbitStruct< bitsize >::bitSize ( ) const [inline]
```

Definition at line 25 of file afldBit.h.

### 6.36.2.2 fill()

```
template<uint bitsize>
void AFlib::id::TbitStruct< bitsize >::fill (
    const std::string str ) [inline]
```

Definition at line 94 of file afldBit.h.

### 6.36.2.3 getBitSet()

```
template<uint bitsize>
std::bitset<bitsize> AFlib::id::TbitStruct< bitsize >::getBitSet (
    uint index,
    uint size ) const [inline]
```

Definition at line 56 of file afldBit.h.

### 6.36.2.4 getCharPiece()

```
template<uint bitsize>
quint8 AFlib::id::TbitStruct< bitsize >::getCharPiece (
    uint index ) const [inline]
```

Definition at line 43 of file afldBit.h.

### 6.36.2.5 getPiece()

```
template<uint bitsize>
template<uint bitsize_>
std::bitset<bitsize_> AFlib::id::TbitStruct< bitsize >::getPiece (
    uint index,
    uint size ) const [inline]
```

Definition at line 28 of file afldBit.h.

### 6.36.2.6 operator std::string()

```
template<uint bitsize>
AFlib::id::TbitStruct< bitsize >::operator std::string ( ) const [inline]
```

Definition at line 80 of file afldBit.h.

#### 6.36.2.7 operator=() [1/4]

```
template<uint bitsize>
TbitStruct<bitsize>& AFlib::id::TbitStruct< bitsize >::operator= (
    const quint16 value ) [inline], [protected]
```

Definition at line 155 of file afldBit.h.

#### 6.36.2.8 operator=() [2/4]

```
template<uint bitsize>
TbitStruct<bitsize>& AFlib::id::TbitStruct< bitsize >::operator= (
    const quint32 value ) [inline], [protected]
```

Definition at line 156 of file afldBit.h.

#### 6.36.2.9 operator=() [3/4]

```
template<uint bitsize>
TbitStruct<bitsize>& AFlib::id::TbitStruct< bitsize >::operator= (
    const quint64 value ) [inline], [protected]
```

Definition at line 157 of file afldBit.h.

#### 6.36.2.10 operator=() [4/4]

```
template<uint bitsize>
TbitStruct<bitsize>& AFlib::id::TbitStruct< bitsize >::operator= (
    const quint8 value ) [inline], [protected]
```

Definition at line 154 of file afldBit.h.

#### 6.36.2.11 setBoolRange()

```
template<uint bitsize>
bool AFlib::id::TbitStruct< bitsize >::setBoolRange (
    quint8 iFrom,
    quint8 iTo,
    std::vector< bool > values ) [inline], [protected]
```

Definition at line 106 of file afldBit.h.

#### 6.36.2.12 setCharPiece()

```
template<uint bitsize>
void AFlib::id::TbitStruct< bitsize >::setCharPiece (
    uint index,
    quint8 ch ) [inline], [protected]
```

Definition at line 119 of file afldBit.h.

#### 6.36.2.13 setFromValue()

```
template<uint bitsize>
template<typename typeNumber , uint size_>
void AFlib::id::TbitStruct< bitsize >::setFromValue (
    typeNumber value,
    uint index,
    uint size ) [inline], [protected]
```

Definition at line 130 of file afldBit.h.

#### 6.36.2.14 setReservedT()

```
template<uint bitsize>
bool AFlib::id::TbitStruct< bitsize >::setReservedT (
    quint8 maxSize,
    quint8 iFrom,
    quint8 iTo,
    std::vector< bool > values ) [inline], [protected]
```

Definition at line 140 of file afldBit.h.

#### 6.36.2.15 setUInt16()

```
template<uint bitsize>
void AFlib::id::TbitStruct< bitsize >::setUInt16 (
    quint16 value,
    uint index = 0,
    uint size = bitsize ) [inline], [protected]
```

Definition at line 160 of file afldBit.h.

#### 6.36.2.16 setUInt32()

```
template<uint bitsize>
void AFlib::id::TbitStruct< bitsize >::setUInt32 (
    quint32 value,
    uint index = 0,
    uint size = bitsize ) [inline], [protected]
```

Definition at line 161 of file afldBit.h.

#### 6.36.2.17 setUInt64()

```
template<uint bitsize>
void AFlib::id::TbitStruct< bitsize >::setUInt64 (
    quint64 value,
    uint index = 0,
    uint size = bitsize ) [inline], [protected]
```

Definition at line 162 of file afldBit.h.

#### 6.36.2.18 setUInt8()

```
template<uint bitsize>
void AFlib::id::TbitStruct< bitsize >::setUInt8 (
    quint8 value,
    uint index = 0,
    uint size = bitsize ) [inline], [protected]
```

Definition at line 159 of file afldBit.h.

#### 6.36.2.19 toString()

```
template<uint bitsize>
std::string AFlib::id::TbitStruct< bitsize >::toString (
    char separator = 8,
    char ch = '`' ) const [inline]
```

Definition at line 81 of file afldBit.h.

### 6.36.2.20 toTypeNumber()

```
template<uint bitsize>
template<typename typeNumber >
typeNumber AFlib::id::TbitStruct< bitsize >::toTypeNumber (
    uint index,
    uint size ) const [inline]
```

Definition at line 59 of file afldBit.h.

### 6.36.2.21 toUInt16()

```
template<uint bitsize>
quint16 AFlib::id::TbitStruct< bitsize >::toUInt16 (
    uint index = 0,
    uint size = 16 ) const [inline]
```

Definition at line 76 of file afldBit.h.

### 6.36.2.22 toUInt32()

```
template<uint bitsize>
quint32 AFlib::id::TbitStruct< bitsize >::toUInt32 (
    uint index = 0,
    uint size = 32 ) const [inline]
```

Definition at line 77 of file afldBit.h.

### 6.36.2.23 toUInt64()

```
template<uint bitsize>
quint64 AFlib::id::TbitStruct< bitsize >::toUInt64 (
    uint index = 0,
    uint size = 64 ) const [inline]
```

Definition at line 78 of file afldBit.h.

### 6.36.2.24 toUInt8()

```
template<uint bitsize>
quint8 AFlib::id::TbitStruct< bitsize >::toUInt8 (
    uint index = 0,
    uint size = 8 ) const [inline]
```

Definition at line 75 of file afldBit.h.

### 6.36.2.25 unite()

```
template<uint bitsize>
template<uint fpart, uint spart>
std::bitset<fpart + spart> AFlib::id::TbitStruct< bitsize >::unite (
    std::bitset< fpart > fp,
    std::bitset< spart > sp ) const [inline]
```

Definition at line 70 of file afldBit.h.

## 6.36.3 Friends And Related Function Documentation

### 6.36.3.1 operator

```
template<uint bitsize>
QDataStream& operator (
    QDataStream & s,
    const TbitStruct< bitsize > & data ) [friend]
```

### 6.36.3.2 operator>>

```
template<uint bitsize>
QDataStream& operator>> (
    QDataStream & s,
    TbitStruct< bitsize > & data ) [friend]
```

## 6.36.4 Member Data Documentation

### 6.36.4.1 m\_bitset

```
template<uint bitsize>
std::bitset<bitsize> AFlib::id::TbitStruct< bitsize >::m_bitset [protected]
```

Definition at line 102 of file afldBit.h.

The documentation for this struct was generated from the following file:

- lib\_baseAF/include/lib\_baseAF/[afldBit.h](#)

## Chapter 7

# File Documentation

### 7.1 lib\_baseAF/account/afAccount.cpp File Reference

```
#include "lib_baseAF/afAccount.h"
#include <QtCore/QVariant>
#include <QtCore/QThread>
#include <QtCore/QJsonArray>
#include <QtCore/QCryptographicHash>
#include <QtCore/QCoreApplication>
```

### 7.2 lib\_baseAF/account/afAccountGroup.cpp File Reference

```
#include "afAccountGroup.h"
#include "afAccountStorage.h"
#include "AFbase/AfEnum"
#include <QtCore/QPair>
```

#### Typedefs

- using [AccountWithAccess](#) = QPair< quint32, quint8 >

#### Functions

- [Q\\_DECLARE\\_METATYPE](#) ([AccountWithAccess](#))
- [AccountWithAccess](#) [makeAccountWithAccess](#) ([AFIdObject\\_bit](#) account, [AFaccount::AccessType](#) access)

#### 7.2.1 Typedef Documentation

### 7.2.1.1 AccountWithAccess

```
using AccountWithAccess = QPair <quint32, quint8>
```

Definition at line 6 of file afAccountGroup.cpp.

## 7.2 Function Documentation

### 7.2.2.1 makeAccountWithAccess()

```
AccountWithAccess makeAccountWithAccess (
    AFIdObject_bit account,
    AFaccount::AccessType access )
```

Definition at line 9 of file afAccountGroup.cpp.

### 7.2.2.2 Q\_DECLARE\_METATYPE()

```
Q_DECLARE_METATYPE (
    AccountWithAccess )
```

## 7.3 lib\_baseAF/account/afAccountInfo.cpp File Reference

```
#include "afAccountInfo.h"
#include <QtCore/QVariant>
```

### Macros

- #define DATE\_TIME "yyy.MM.dd hh:mm:ss"

### 7.3.1 Macro Definition Documentation

#### 7.3.1.1 DATE\_TIME

```
#define DATE_TIME "yyy.MM.dd hh:mm:ss"
```

Definition at line 4 of file afAccountInfo.cpp.

## 7.4 lib\_baseAF/account/afAccountStorage.cpp File Reference

```
#include "afAccountStorage.h"
#include <QtCore/QCoreApplication>
#include <QtCore/QDataStream>
#include <QtCore/QFile>
#include <QtCore/QCryptographicHash>
#include <QtCore/QDebug>
#include <AFbase/AfDir>
#include <AFbase/AfStorage>
#include <AFbase/AfEnum>
```

### Variables

- [AFaccount::AccountPtr m\\_user](#)
- [AFaccount::AccountPtr m\\_guest](#)
- [AFaccount::StoragePtr m\\_accountStorage](#)

### 7.4.1 Variable Documentation

#### 7.4.1.1 m\_accountStorage

```
AFaccount::StoragePtr m_accountStorage
```

Definition at line 14 of file afAccountStorage.cpp.

#### 7.4.1.2 m\_guest

```
AFaccount::AccountPtr m_guest
```

Definition at line 13 of file afAccountStorage.cpp.

#### 7.4.1.3 m\_user

```
AFaccount::AccountPtr m_user
```

Definition at line 12 of file afAccountStorage.cpp.

## 7.5 lib\_baseAF/base/afAPI.cpp File Reference

```
#include "afAPI.h"
#include <optional>
#include <QtCore/QCoreApplication>
#include "afServerSettings.h"
#include "AfStorage"
#include <QtCore/QByteArray>
#include "afAccountStorage.h"
```

### Namespaces

- [AFlib](#)

### Functions

- [AFapiPtr afAPI](#) ()
- [QDataStream & AFlib::operator<<](#) (QDataStream &d, const [AFlib::RequestType](#) &type)
- [QDataStream & AFlib::operator>>](#) (QDataStream &d, [AFlib::RequestType](#) &type)

### 7.5.1 Function Documentation

#### 7.5.1.1 afAPI()

```
AFapiPtr afAPI ( )
```

Definition at line 233 of file afAPI.cpp.

## 7.6 lib\_baseAF/base/afEnum.cpp File Reference

```
#include "afEnum.h"
```

### Functions

- bool [operator==](#) ([AFlib::AccountIdType](#) f, [AFlib::AccountIdType](#) s)
- [QDebug operator<<](#) (QDebug d, [AFlib::FileType](#) type)
- [QDataStream & operator<<](#) (QDataStream &s, const [AFlib::FileType](#) &type)
- [QDataStream & operator>>](#) (QDataStream &s, [AFlib::FileType](#) &type)

### 7.6.1 Function Documentation

#### 7.6.1.1 operator<<() [1/2]

```
QDataStream& operator<< (
    QDataStream & s,
    const AFlib::FileType & type )
```

Definition at line 73 of file afEnum.cpp.

#### 7.6.1.2 operator<<() [2/2]

```
QDebug operator<< (
    QDebug d,
    AFlib::FileType type )
```

Definition at line 51 of file afEnum.cpp.

#### 7.6.1.3 operator==( )

```
bool operator== (
    AFlib::AccountIdType f,
    AFlib::AccountIdType s )
```

Definition at line 13 of file afEnum.cpp.

#### 7.6.1.4 operator>>()

```
QDataStream& operator>> (
    QDataStream & s,
    AFlib::FileType & type )
```

Definition at line 78 of file afEnum.cpp.

## 7.7 lib\_baseAF/base/afFunction.cpp File Reference

```
#include <QtCore/QDebug>
#include "afFunction.h"
#include "afSystem.h"
#include <QtCore/QDateTime>
```

## 7.8 lib\_baseAF/base/afIdAccount.cpp File Reference

```
#include "afIdAccount.h"
```

## 7.9 lib\_baseAF/base/afIdGlobalBit.cpp File Reference

```
#include "afIdGlobalBit.h"  
#include "AfFunction"
```

### Namespaces

- [AFlib](#)
- [AFlib::id](#)

### Functions

- `QDataStream & AFlib::id::operator<< (QDataStream &s, const Global_bit &id)`
- `QDataStream & AFlib::id::operator>> (QDataStream &s, Global_bit &id)`
- `QDebug operator<< (QDebug d, const AFlib::id::Global\_bit &object)`

### 7.9.1 Function Documentation

#### 7.9.1.1 operator<<()

```
QDebug operator<< (  
    QDebug d,  
    const AFlib::id::Global\_bit & object )
```

Definition at line 33 of file afIdGlobalBit.cpp.

## 7.10 lib\_baseAF/base/afIdHistory.cpp File Reference

```
#include "afIdHistory.h"  
#include "afStorage.h"  
#include "afFunction.h"
```

### Namespaces

- [AFlib](#)
- [AFlib::id](#)

## Functions

- QDataStream & [AFlib::id::operator<<](#) (QDataStream &stream, const History &data)
- QDataStream & [AFlib::id::operator>>](#) (QDataStream &stream, History &data)

## 7.11 lib\_baseAF/base/afldObject.cpp File Reference

```
#include "afldObject.h"
#include "afFile.h"
#include "AfStorage"
#include <QtCore/QDebug>
#include "afFunction.h"
```

## Namespaces

- [AFlib](#)
- [AFlib::id](#)

## Functions

- QDataStream & [AFlib::id::operator<<](#) (QDataStream &stream, const [AFlib::id::Object](#) &data)
- QDataStream & [AFlib::id::operator>>](#) (QDataStream &stream, [AFlib::id::Object](#) &data)
- QDebug [operator<<](#) (QDebug d, const [AFlib::id::Object](#) &object)
- bool [operator==](#) (const [AFlib::id::ObjectPtr](#) ptr, const [AFlib::id::Object](#) &object)
- bool [operator==](#) (const [AFlib::id::ObjectPtr](#) l, const [AFlib::id::ObjectPtr](#) r)
- [AFlib::id::ObjectPtrV](#) & [operator+=](#) ([AFlib::id::ObjectPtrV](#) &l, const [AFlib::id::ObjectPtrV](#) &r)

### 7.11.1 Function Documentation

#### 7.11.1.1 operator+=()

```
AFlib::id::ObjectPtrV& operator+= (
    AFlib::id::ObjectPtrV & l,
    const AFlib::id::ObjectPtrV & r )
```

Definition at line 307 of file afldObject.cpp.

#### 7.11.1.2 operator<<()

```
QDebug operator<< (
    QDebug d,
    const AFlib::id::Object & object )
```

Definition at line 283 of file afldObject.cpp.

### 7.11.1.3 operator==( ) [1/2]

```
bool operator== (
    const AFlib::id::ObjectPtr l,
    const AFlib::id::ObjectPtr r )
```

Definition at line 302 of file afldObject.cpp.

### 7.11.1.4 operator==( ) [2/2]

```
bool operator== (
    const AFlib::id::ObjectPtr ptr,
    const AFlib::id::Object & object )
```

Definition at line 295 of file afldObject.cpp.

## 7.12 lib\_baseAF/base/afldObjectBit.cpp File Reference

```
#include "afIdObjectBit.h"
#include "AfFunction"
```

### Functions

- QDebug operator<< (QDebug d, const AFlib::id::Object\_bit &obj\_b)

### 7.12.1 Function Documentation

#### 7.12.1.1 operator<<()

```
QDebug operator<< (
    QDebug d,
    const AFlib::id::Object_bit & obj_b )
```

Definition at line 49 of file afldObjectBit.cpp.

## 7.13 lib\_baseAF/base/afldObjectTemplate.cpp File Reference

```
#include "afIdObjectTemplate.h"
#include <AFaccount/AfAccountStorage>
#include <AFbase/AfStorage>
```

## 7.14 lib\_baseAF/base/afldOperate.cpp File Reference

```
#include "afIdOperate.h"
#include <QtCore/QSharedPointer>
#include <QtCore/Qtimer>
#include <AfFunction>
```

### Functions

- QDataStream & [operator<<](#) (QDataStream &stream, const [AFlib::id::OperatePtrList](#) &data)
- QDataStream & [operator>>](#) (QDataStream &stream, [AFlib::id::OperatePtrList](#) &data)
- std::ostream & [operator<<](#) (std::ostream &os, const [AFlib::id::Operate](#) &op)
- QDebug [operator<<](#) (QDebug d, const [AFlib::id::Operate](#) &op)
- QDebug [operator<<](#) (QDebug d, const [AFlib::id::Operate\\_bit](#) &op\_b)

### 7.14.1 Function Documentation

#### 7.14.1.1 [operator<<\(\)](#) [1/4]

```
QDataStream& operator<< (
    QDataStream & stream,
    const AFlib::id::OperatePtrList & data )
```

Definition at line 74 of file afldOperate.cpp.

#### 7.14.1.2 [operator<<\(\)](#) [2/4]

```
QDebug operator<< (
    QDebug d,
    const AFlib::id::Operate & op )
```

Definition at line 131 of file afldOperate.cpp.

#### 7.14.1.3 [operator<<\(\)](#) [3/4]

```
QDebug operator<< (
    QDebug d,
    const AFlib::id::Operate\_bit & op_b )
```

Definition at line 145 of file afldOperate.cpp.

#### 7.14.1.4 operator<<() [4/4]

```
std::ostream& operator<< (
    std::ostream & os,
    const AFlib::id::Operate & op )
```

Definition at line 117 of file afldOperate.cpp.

#### 7.14.1.5 operator>>()

```
QDataStream& operator>> (
    QDataStream & stream,
    AFlib::id::OperatePtrList & data )
```

Definition at line 82 of file afldOperate.cpp.

### 7.15 lib\_baseAF/base/afSystem.cpp File Reference

```
#include "afSystem.h"
```

### 7.16 lib\_baseAF/include/afAccountLib.h File Reference

```

#### 7.44.2.1 AFDir()

```
DirPtr AFDir ( )
```

Definition at line 243 of file afDir.cpp.

## 7.45 lib\_baseAF/tool/afDir2.cpp File Reference

```
#include <QtCore/QDebug>
#include <QtCore/QCoreApplication>
#include "dir.h"
```

## Macros

- #define `TEST_RELEASE` true

## Functions

- `DirPtr AFDir ()`

## 7.45.1 Macro Definition Documentation

### 7.45.1.1 TEST\_RELEASE

```
#define TEST_RELEASE true
```

Definition at line 7 of file afDir2.cpp.

## 7.45.2 Function Documentation

### 7.45.2.1 AFDDir()

```
DirPtr AFDDir ( )
```

Definition at line 172 of file afDir2.cpp.

## 7.46 lib\_baseAF/tool/afFile.cpp File Reference

```
#include "lib_baseAF/afFile.h"  
#include "lib_baseAF/afDir.h"  
#include <QtCore/QFile>  
#include <QtCore/QDataStream>  
#include <QtCore/QSharedPointer>  
#include <QtCore/QDebug>
```

## 7.47 lib\_baseAF/tool/afPreference.cpp File Reference

## 7.48 lib\_baseAF/tool/afServerSettings.cpp File Reference

```
#include "lib_baseAF/afServerSettings.h"
```

### Functions

- [AFlib::ServerSettingPtr afServerSettings](#) (QObject \*parent)

### Variables

- [AFlib::ServerSettingPtr p\\_serverSettingsPtr](#)

## 7.48.1 Function Documentation

### 7.48.1.1 afServerSettings()

```
AFLib::ServerSettingPtr afServerSettings (
    QObject * parent )
```

Definition at line 38 of file afServerSettings.cpp.

## 7.48.2 Variable Documentation

### 7.48.2.1 p\_serverSettingsPtr

```
AFLib::ServerSettingPtr p_serverSettingsPtr
```

Definition at line 3 of file afServerSettings.cpp.

## 7.49 lib\_baseAF/tool/afSetting.cpp File Reference

```
#include "afSetting.h"
#include <QtCore/QVariant>
```

## 7.50 lib\_baseAF/tool/afStorage.cpp File Reference

```
#include "afStorage.h"
#include <QtCore/QDebug>
#include "lib_baseAF/afFile.h"
#include "afTransferOperateList.h"
#include "afAccountStorage.h"
```

### Variables

- static [StoragePtr](#) storage\_ptr

### 7.50.1 Variable Documentation

### 7.50.1.1 storage\_ptr

```
StoragePtr storage_ptr [static]
```

Definition at line 8 of file afStorage.cpp.

## 7.51 lib\_baseAF/tool/afTransferOperateList.cpp File Reference

```
#include "afTransferOperateList.h"
```

### Namespaces

- [AFlib](#)
- [AFlib::transfer](#)
- [AFlib::transfer::answer](#)
- [AFlib::transfer::send](#)

### Functions

- [QDataStream & AFlib::transfer::answer::operator<<](#) (QDataStream &stream, const [AFlib::transfer::answer::Object](#) &data)
- [QDataStream & AFlib::transfer::answer::operator>>](#) (QDataStream &stream, [AFlib::transfer::answer::Object](#) &data)
- [QDataStream & AFlib::transfer::answer::operator<<](#) (QDataStream &stream, const [AFlib::transfer::answer::DPathObjectList](#) &data)
- [QDataStream & AFlib::transfer::answer::operator>>](#) (QDataStream &stream, [AFlib::transfer::answer::DPathObjectList](#) &data)
- [QDataStream & AFlib::transfer::send::operator>>](#) (QDataStream &stream, Objects &data)
- [QDataStream & AFlib::transfer::send::operator<<](#) (QDataStream &stream, Objects &data)
- [QDataStream & AFlib::transfer::send::operator<<](#) (QDataStream &stream, const [AFlib::transfer::send::Operates](#) &data)
- [QDataStream & AFlib::transfer::send::operator>>](#) (QDataStream &stream, [AFlib::transfer::send::Operates](#) &data)

## 7.52 lib\_quickAF/include/lib\_quickAF/guiApplication.h File Reference

```
#include <QtGui/QGuiApplication>
#include <QtQuick/QQuickView>
#include "guiPlugin.h"
#include "menuModel.h"
```

### Classes

- class [AFquick::GuiApplication](#)

## Namespaces

- [AFquick](#)

## Typedefs

- typedef [AFquick::GuiApplication](#) [AFguiApplication](#)

### 7.52.1 Typedef Documentation

#### 7.52.1.1 AFguiApplication

```
typedef AFquick::GuiApplication AFguiApplication
```

Definition at line 76 of file guiApplication.h.

## 7.53 lib\_quickAF/include/lib\_quickAF/guiPlugin.h File Reference

```
#include <QtCore/QObject>  
#include <QtCore/QSharedPointer>  
#include <QtCore/QUrl>
```

## Classes

- class [AFquick::GuiPlugin](#)

## Namespaces

- [AFquick](#)

## Typedefs

- typedef QSharedPointer< GuiPlugin > [AFquick::GuiPluginPtr](#)
- typedef [AFquick::GuiPluginPtr](#) [AFguiPluginPtr](#)

### 7.53.1 Typedef Documentation

### 7.53.1.1 AFguiPluginPtr

```
typedef AFquick::GuiPluginPtr AFguiPluginPtr
```

Definition at line 41 of file guiPlugin.h.

## 7.54 lib\_quickAF/include/lib\_quickAF/guiSize.h File Reference

```
#include <QtCore/QPoint>
#include <QtCore/QObject>
#include <QtCore/QSharedPointer>
```

### Classes

- class [AFquick::GuiSize](#)

### Namespaces

- [AFquick](#)

### Typedefs

- typedef QSharedPointer< GuiSize > [AFquick::GuiSizePtr](#)
- typedef [AFquick::GuiSize](#) [AFguiSize](#)
- typedef [AFquick::GuiSizePtr](#) [AFguiSizePtr](#)

### Functions

- GuiSizePtr [AFquick::guiSize](#) ()
- [AFguiSizePtr](#) [afGuiSize](#) ()

### 7.54.1 Typedef Documentation

#### 7.54.1.1 AFguiSize

```
typedef AFquick::GuiSize AFguiSize
```

Definition at line 43 of file guiSize.h.

### 7.54.1.2 AFguiSizePtr

```
typedef AFquick::GuiSizePtr AFguiSizePtr
```

Definition at line 44 of file guiSize.h.

## 7.54.2 Function Documentation

### 7.54.2.1 afGuiSize()

```
AFguiSizePtr afGuiSize ( )
```

Definition at line 52 of file guiSize.cpp.

## 7.55 lib\_quickAF/include/lib\_quickAF/menuModel.h File Reference

```
#include <QtCore/QAbstractListModel>
```
